TROUBLESHOOTING

If you encounter issues with your Roku TV, refer to the following common solutions before contacting support.

Problem	Possible Solution
No Power	Ensure the power cord is securely plugged into the TV and the electrical outlet. Test the outlet with another device to confirm it has power. Try a different power outlet.
No Picture, But Sound is Present	Check the input source. Press the Home button on the remote and select the correct input (e.g., HDMI 1, Cable Box). Ensure all HDMI cables are securely connected. Try a different HDMI cable.
No Sound, But Picture is Present	Check the TV's volume level and ensure it is not muted. Verify audio settings in the TV menu. If using external audio devices, ensure they are properly connected and powered on.
Cannot Connect to Wi-Fi	Ensure your Wi-Fi router is on and functioning. Re-enter your Wi-Fi password carefully. Move the TV closer to the router or reduce interference from other devices. Restart your router and modem.
Remote Control Not Responding	Replace the batteries in the remote control. Ensure there are no obstructions between the remote and the TV. For enhanced voice remote, ensure it is paired correctly (refer to Roku support for pairing instructions if needed).

If the issue persists after trying these steps, a factory reset may be necessary. Go to **Settings > System > Advanced system settings > Factory reset**. Note that a factory reset will erase all your settings and installed channels.
