Armitron 20/4591CHGP

Armitron Men's Day-Date Function Expansion Band Watch

Model: 20/4591CHGP

PRODUCT OVERVIEW

The Armitron Men's Day-Date Function Expansion Band Watch, model 20/4591CHGP, is designed for reliable timekeeping and classic style. This timepiece features a durable construction and practical functions for daily wear.

- **Mineral crystal lens:** Provides enhanced scratch resistance for the watch face.
- **Champagne sunray dial with day/date calendar window:** Displays both the current day of the week and the date for convenient reference.
- **Gold-tone luminous hands and markers:** Ensures visibility in low-light conditions.
- **Black outer minute track:** Aids in precise time reading.
- **Gold-tone expansion band:** Offers a comfortable and flexible fit without the need for a clasp.
- **Water resistant to 165 feet (50M):** Suitable for short periods of recreational swimming, but not for diving or snorkeling.

SETUP AND INITIAL ADJUSTMENT

Before wearing your watch, it is important to set the correct time, day, and date.

Setting the Time

1. Locate the crown on the right side of the watch case.
2. Gently pull the crown out to the **second position** (farthest out).
3. Rotate the crown clockwise or counter-clockwise to move the hour and minute hands until the correct time is displayed. Ensure to account for AM/PM if setting the date later.
4. Once the time is set, push the crown back in fully to the **first position** (normal operating position) to start the watch movement.

Setting the Day and Date

The watch features a quick-set function for the day and date. Avoid setting the date between 9:00 PM and 3:00 AM, as this can interfere with the automatic date change mechanism.

1. Gently pull the crown out to the **first position** (one click out from fully pushed in).
2. Rotate the crown *clockwise* to adjust the **date**.
3. Rotate the crown *counter-clockwise* to adjust the **day of the week**.
4. Once the day and date are set, push the crown back in fully to the **normal operating position**.
5. If the date changes at noon instead of midnight, advance the time by 12 hours.

OPERATING YOUR WATCH

Your Armitron watch is designed for daily wear and reliable performance.

Water Resistance

This watch is water resistant to 165 feet (50 meters). This rating means the watch is suitable for short periods of recreational swimming. It is **not** suitable for diving, snorkeling, or prolonged water activities. Avoid operating the crown or pushers when the watch is wet, as this can compromise the water resistance.

Luminous Features

The gold-tone hands and markers are treated with a luminous material that absorbs light and glows in the dark. For optimal glow, expose the watch face to a bright light source for a few minutes before entering a dark environment.

MAINTENANCE AND CARE

Proper care will ensure the longevity and performance of your Armitron watch.

Cleaning

- Wipe the watch case and band regularly with a soft, dry cloth to remove dust and dirt.
- For the expansion band, a slightly damp cloth can be used, ensuring to dry it thoroughly afterwards.
- Avoid using harsh chemicals, solvents, or abrasive cleaners, as these can damage the watch's finish.

Battery Replacement

The watch is powered by a quartz movement and requires a battery. When the watch stops or the second hand begins to skip, it indicates a low battery. Battery replacement should be performed by a qualified watch technician to

ensure proper sealing and maintain water resistance.

Storage

When not in use for extended periods, store your watch in a cool, dry place away from direct sunlight and extreme temperatures. Keeping it in its original box or a watch case can help protect it from dust and scratches.

TROUBLESHOOTING

If you encounter issues with your watch, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Watch has stopped or is running intermittently.	Low or dead battery.	Replace the battery. It is recommended to have this done by a professional watch technician.
Time is incorrect.	Crown is not fully pushed in, or time needs to be reset.	Ensure the crown is fully pushed in. Refer to the "Setting the Time" section to reset the time.
Day or date is incorrect or changes at the wrong time.	Day/date not set correctly, or set during restricted hours.	Refer to the "Setting the Day and Date" section. Avoid setting between 9 PM and 3 AM. If the date changes at noon, advance the time by 12 hours.
Condensation under the crystal.	Exposure to extreme temperature changes or compromised water resistance.	Seek professional service immediately to prevent damage to the movement. Avoid further water exposure.

If the problem persists after attempting these solutions, please contact Armitron customer support or a certified watch repair center.
