Inspection:

Periodically check all screws and fasteners to ensure they remain tight. Retighten if necessary. Inspect the cabinet for any signs of wear or damage, especially to the glass doors and hinges. Address any issues promptly to maintain safety and stability.

7. TROUBLESHOOTING

- Ensure all assembly screws are fully tightened.

- Verify the cabinet is placed on a level surface. If not, use shims under the feet to stabilize it.
- Confirm the wall fixation kit is properly installed and securing the cabinet to the wall.

Doors Do Not Align Properly:

- Check that the cabinet frame is square and level.
- Adjust the hinges. Most cabinet hinges allow for minor adjustments to align doors horizontally, vertically, and in depth. Refer to your assembly manual for specific hinge adjustment instructions.
