- **Faucet and Drain:** Clean chrome or metal finishes with a soft cloth and mild soap. Avoid abrasive pads or cleaners that can scratch the surface.
- **Spills:** Wipe up any water spills on the vanity surface immediately to prevent water damage to the engineered wood.

Troubleshooting

- **Loose Connections:** If the cabinet feels wobbly, check all screws and fasteners to ensure they are tightened securely. Do not overtighten.
- **Water Leaks:** For leaks around the sink or faucet, first ensure all plumbing connections are properly sealed with plumber's tape or sealant as instructed in the installation manual. Check that the drain assembly is correctly seated. If leaks persist, consult a professional plumber.
- **Cabinet Doors Not Closing Properly:** Check if the magnetic catches are aligned and securely fastened. Adjust hinges if necessary to ensure proper door alignment.
