Manvins G20 Robot Vacuum Cleaner Filter Replacement Manual

Model: MANVINS G20 (for compatible filters)

Overview Installation Maintenance Troubleshooting Specifications Support

1. Product Overview

This manual provides instructions for the replacement of filters compatible with the MANVINS G20 Robot Vacuum Cleaner. Regular filter replacement is crucial for maintaining the optimal cleaning performance of your robot vacuum and ensuring a healthy indoor environment by reducing dust and allergen circulation.

Image 1.1: A single Cloudpower replacement filter, showing its pleated design. This filter is designed to capture fine dust and particles.

These replacement filters are manufactured by Cloudpower and are specifically designed to fit the MANVINS G20 Robot Vacuum Cleaner, as well as other compatible models such as BR150/BR151.

2. Filter Installation

Follow these steps to properly install the new replacement filter into your MANVINS G20 Robot Vacuum Cleaner:

1. **Prepare the Vacuum:** Ensure your MANVINS G20 robot vacuum cleaner is powered off and unplugged (if applicable) before beginning the filter replacement process. Place the vacuum upside down on a clean, flat surface to access the filter compartment.
2. **Locate the Filter Compartment:** The filter is typically located within the dustbin of the robot vacuum. Refer to your MANVINS G20 vacuum's original user manual for the exact location and method to open the dustbin.
3. **Remove the Old Filter:** Carefully remove the existing filter from the dustbin. It may be held in place by clips or a simple slot. Dispose of the old filter responsibly.
4. **Clean the Dustbin:** Before inserting the new filter, empty the dustbin and clean any accumulated dust or debris from the compartment to ensure optimal performance and fit of the new filter.

5. **Insert the New Filter:** Take a new Cloudpower replacement filter. Align the filter with the filter slot or clips in the dustbin. Gently press it into place until it is securely seated. Ensure there are no gaps around the edges, as this could compromise filtration efficiency.
6. **Close the Dustbin:** Reattach the dustbin to the robot vacuum cleaner, ensuring it clicks securely into place.

Image 2.1: Illustrates three replacement filters positioned near a MANVINS G20 robot vacuum cleaner, indicating their use with the device.

3. Maintenance and Replacement Frequency

To ensure your MANVINS G20 Robot Vacuum Cleaner continues to operate at its best, regular filter maintenance is essential. These filters are designed to capture dust and allergic particles, and their effectiveness diminishes over time as they become clogged.

- **Recommended Replacement:** It is recommended to replace the filter every 2 to 3 months. However, this frequency may vary depending on your usage habits, the presence of pets, and the overall dustiness of your environment. If you notice a decrease in suction power or an increase in dust escaping the vacuum, it may be time to replace the filter sooner.

- **Filter Type:** These are disposable replacement filters and are not designed for washing or extensive cleaning. Attempting to wash the filter may damage its filtration capabilities.

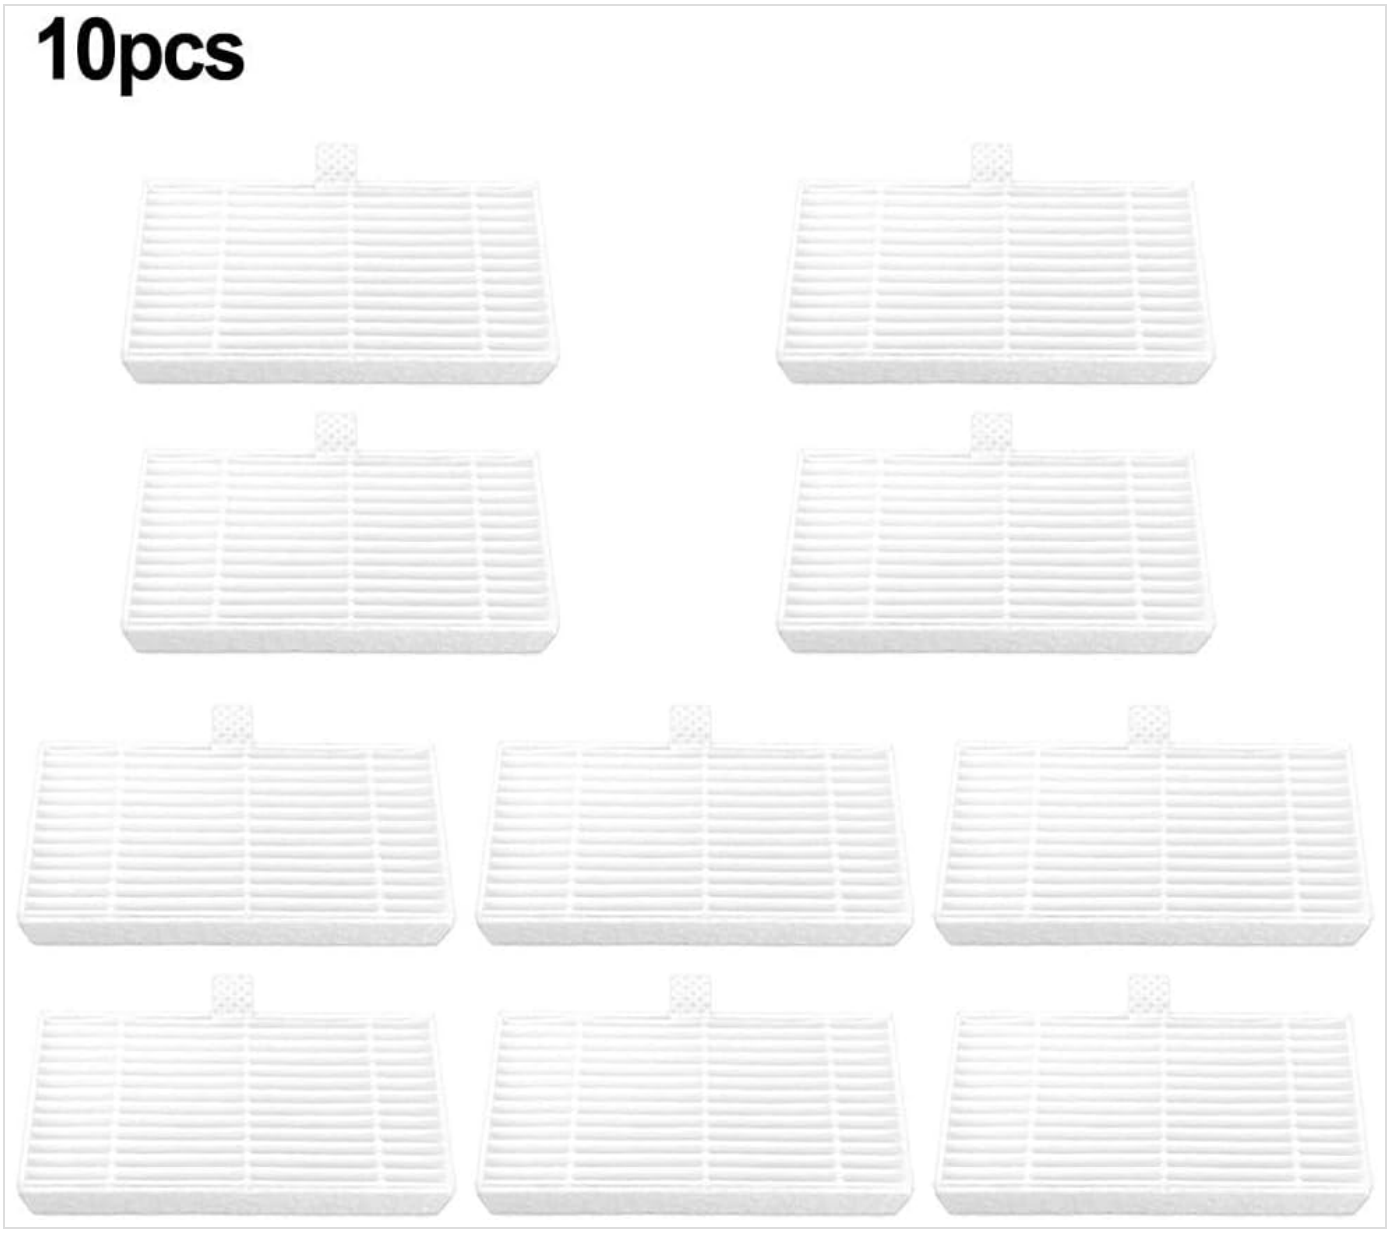

Image 3.1: A pack of ten replacement filters, highlighting the quantity provided for multiple replacements.

4. Troubleshooting

If you encounter issues after replacing the filter, consider the following:

- **Filter Does Not Fit:**
  - Verify that you have purchased the correct replacement filter model for your MANVINS G20 Robot Vacuum Cleaner. These filters are specifically designed for the G20 and compatible BR150/BR151 models.
  - Ensure the filter is oriented correctly and fully seated within the dustbin compartment. Do not force the filter into place.
- **Reduced Suction Power After Replacement:**
  - Check if the new filter is installed correctly and securely. A loose filter can lead to air leaks and reduced suction.
  - Ensure the dustbin is empty and clean, and that it is properly reattached to the vacuum.
  - Inspect other components of the vacuum, such as brushes and air ducts, for blockages that might be affecting

suction.

- **Unusual Noises:**
  - Confirm the filter is seated correctly and not vibrating.
  - Check for any foreign objects that might have fallen into the dustbin or filter compartment during replacement.

5. Product Specifications

Key specifications for the Cloudpower replacement filters:

Feature	Detail
Brand	Cloudpower
Compatible Models	MANVINS G20, BR150/BR151
Material	Polyester
Dimensions (Approx.)	81mm (Length) x 40mm (Width) x 12mm (Thickness)
Number of Pieces	10 filters per pack (as per product variant)
Reusability	Disposable (not reusable/washable)

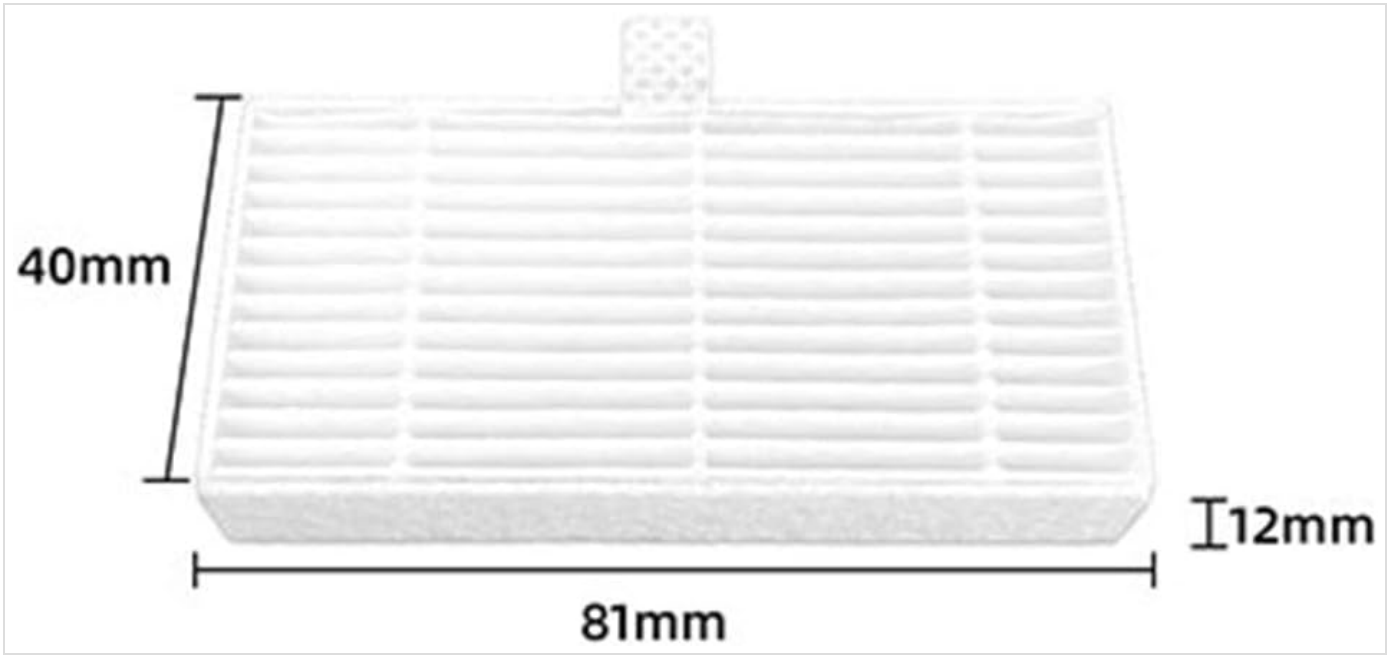

Image 5.1: Detailed dimensions of the replacement filter, showing approximate measurements of 81mm by 40mm by 12mm.

6. Warranty Information

Specific warranty details for Cloudpower replacement filters are not provided within this manual. For information regarding product warranty, returns, or defects, please refer to the purchase platform's return policy or contact the seller directly. It is advisable to retain your proof of purchase for any warranty claims.

7. Customer Support

For further assistance or inquiries regarding Cloudpower replacement filters, please contact the seller or manufacturer

through the platform where the product was purchased. For issues related to your MANVINS G20 Robot Vacuum Cleaner itself, please refer to the vacuum cleaner's original user manual or contact MANVINS customer support.
