4. Assembly Instructions

Follow these steps carefully for proper assembly. It is recommended to lay out all parts before starting.

1. **Prepare the Base:** Attach the first vertical support post to the base plate. Ensure the side with holes for accessory hooks and cord management is facing the front. Secure with screws.
2. **Thread the Charging Cable:** Before attaching subsequent posts, thread your Dyson charger's power cord through the designated holes in each vertical post section. Insert the black rubber plug into the hole at the bottom of the first post section where the wire passes through. This is crucial for hidden cord management.
3. **Assemble Vertical Posts:** Connect the remaining vertical support post sections, ensuring the holes align and face the front. Thread the charging cable through each section as you connect them. Secure each section using the provided screws and internal silver brackets. Ensure all four screws in each section are secure.
4. **Install Accessory Hooks:** Insert the accessory hooks into the designated slots on the vertical posts. Push down slightly to secure them. These hooks are designed for easy installation and removal without tools.
5. **Attach Dyson Charging Dock:** Secure your Dyson vacuum's charging dock (not included) to the top plastic bracket of the stand. This bracket is typically provided with your Dyson vacuum for wall mounting. Ensure the bracket is oriented correctly, facing the front of the unit, and securely attached.
6. **Connect Charger:** Route the charging cable from inside the stand to your Dyson charging dock. Plug the charger into a power outlet.

6. Maintenance

To ensure your Haturi Vacuum Stand remains in optimal condition:

- **Cleaning:** Wipe the stand with a soft, damp cloth to remove dust and dirt. Avoid using abrasive cleaners or solvents, as these may damage the finish.
- **Inspection:** Periodically check all screws and connections to ensure they remain tight. Re-tighten if necessary to maintain stability.
- **Placement:** Position the stand on a flat, stable surface to prevent wobbling or tipping.

7. Troubleshooting

- **Stand is Wobbly:**
  Solution: Ensure all screws are securely tightened, especially those connecting the vertical posts and the base. Verify that the internal silver brackets are correctly positioned within the posts. Place the stand on a level surface.
- **Charging Cable Does Not Fit/Route Properly:**
  Solution: The charging cable must be threaded through each post section during assembly, before connecting the sections. If the stand is fully assembled, you may need to partially disassemble it to properly route the cable. Ensure the rubber plugs are correctly inserted to secure the cable.
- **Accessories Do Not Stay on Hooks:**
  Solution: Ensure the hooks are fully inserted and pushed down into their slots. If an accessory is too heavy or awkwardly shaped, try a different hook position or consider storing it separately.
- **Dyson Vacuum Does Not Dock Securely:**
  Solution: Verify that your Dyson charging dock is correctly attached to the stand's top bracket and that the vacuum is properly aligned with the dock's connection points.
