4. Step 4: Attach Extra Support Leg (if applicable).

7. TROUBLESHOOTING

If you encounter any issues with your shelf, refer to the following common problems and solutions.

Problem	Possible Cause	Solution
Shelf is wobbly/unstable.	Uneven floor; loose screws; anti-tipping strap not installed.	Adjust the leveling feet until stable. Tighten all assembly screws. Install the anti-tipping strap to the wall.
Parts do not align during assembly.	Screws overtightened prematurely; incorrect orientation of parts.	Loosen all screws slightly, realign parts, then retighten. Double-check the assembly diagram for correct part orientation.
Shelf appears scratched after assembly.	Assembly on a hard or abrasive surface.	Always assemble on a soft, clean surface (e.g., carpet, blanket) to prevent cosmetic damage.
