## 5. Maintenance

---

Proper maintenance ensures the longevity and performance of your SpeedMaster Steering Wheel:

- **Cleaning:** Use a soft, dry cloth to wipe down the steering wheel, pedals, and shifter. For stubborn dirt, slightly dampen the cloth with water. Avoid using harsh chemicals, abrasive cleaners, or solvents, as these can damage the finish and internal components.
- **Storage:** When not in use, store the unit in a clean, dry place away from direct sunlight and extreme temperatures. Disconnect all cables to prevent tangling and damage.
- **Cable Management:** Avoid bending or crimping cables excessively. Use cable ties to keep them organized and prevent strain on the connectors.
- **Avoid Liquids:** Keep liquids away from the steering wheel and pedal unit to prevent electrical damage.
