TROUBLESHOOTING

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
Machine stops or yarn snags	Yarn tangle, knot, or excessive tension.	Turn off the machine. Clear any tangles or knots. Ensure yarn is fed smoothly. Restart the machine by turning the knob off and then on again.
Yarn cakes are loose or uneven	Insufficient tension, incorrect threading, or winding speed too high.	Ensure yarn is threaded through all tension guides. Check that the tension spring coil is correctly positioned. Reduce winding speed.
Machine struggles to pull yarn from a swift	Resistance from the swift or yarn type.	The winder is not recommended for use with a swift. If used, manually assist the swift to reduce resistance, especially at the beginning of winding.
Machine makes unusual noises or vibrates excessively	Unstable setup, yarn type incompatibility, or internal issue.	Ensure the winder is securely clamped to a stable surface. Avoid winding super bulky, very thin, smooth, or highly elastic yarns (e.g., acrylic, polyester) as they may not be suitable.
Yarn fibers are stripping	Repeated winding/unwinding or abrasive guides.	Minimize re-winding. Ensure yarn is not catching on any rough edges.
