

## VOLANTEXRC EXA76206

# VOLANTEXRC BF109 3-Channel RC Plane Instruction Manual

Model: EXA76206

## INTRODUCTION

This manual provides essential information for the safe and effective operation of your VOLANTEXRC BF109 3-Channel Remote Control Airplane. Please read it thoroughly before assembly and flight to ensure optimal performance and safety. This model is designed for beginners and experienced pilots alike, featuring a 6-axis gyro stabilization system for easy control.

## SAFETY INFORMATION

- Always operate the aircraft in open areas, away from people, buildings, and obstacles.
- Avoid flying in strong winds or adverse weather conditions.
- Ensure all batteries are fully charged and correctly installed before each flight.
- Keep hands and face clear of propellers when the aircraft is powered on.
- Adult supervision is recommended for younger users.

## BOX CONTENTS

Your VOLANTEXRC BF109 package includes the following items:

- VOLANTEXRC BF109 RC Plane (Pre-assembled)
- 2.4GHz Remote Control Transmitter
- Rechargeable Lithium Batteries (x2)
- USB Charging Cable
- Extra Propellers
- Landing Gear Set

- Instruction Manual

*Image: Contents of the VOLANTEXRC BF109 package.*

## SETUP

---

### 1. Landing Gear Installation

Carefully attach the landing gear to the designated slots on the underside of the aircraft. Ensure they are securely fastened for ground take-offs and landings.

# 6-AXIS GYRO STABILIZER

No panic, just enjoy flying with gyro assist

*Image: Attaching the landing gear to the aircraft.*

## 2. Propeller Attachment

The main propeller is typically pre-installed. If replacement is needed, carefully align the new propeller with the motor shaft and press firmly. Ensure the small side propellers are also securely in place.

# LOW BATTERY ALARM

The transmitter beeps with flashing light when the plane is low battery.

*Image: Detail of the propeller assembly.*

## 3. Battery Installation

- **Aircraft Battery:** Open the battery hatch on the bottom of the airplane. Connect the flight battery and carefully place it inside the compartment. Close the hatch.
- **Remote Control Battery:** Insert 4 AA batteries (not included) into the remote control's battery compartment.

*Image: Battery compartment on the underside of the plane.*

#### 4. Gyro Calibration

Place the airplane on a horizontal surface before powering it on. This allows the 6-axis gyro system to calibrate correctly, ensuring stable flight. The key is to keep it left-and-right balanced.

*Image: Visual representation of the 6-axis gyro stabilizer.*

## OPERATING

### 1. Remote Control Functions

The 2.4GHz remote control provides precise 3-channel control:

- **Left Stick (Throttle):** Controls the speed of the propellers for ascent and descent.
- **Right Stick (Elevator/Yaw):** Controls pitch (up/down) and yaw (left/right turns).
- **Trimmers:** Used to fine-tune the aircraft's flight path if it drifts.

## 2. Take-off Procedures

The BF109 offers two methods for take-off:

- **Hand Throw:** Hold the aircraft firmly, apply full throttle, and gently throw it forward into the wind.
- **Ground Take-off:** Place the aircraft on a smooth, flat surface. Apply full throttle, and the aircraft will accelerate and lift off.

*Image: Hand throw and ground take-off methods.*

## 3. Flight Environment

For optimal flight experience, choose a large, open outdoor area free from trees, power lines, and other obstructions. The 2.4GHz radio system allows multiple aircraft to fly simultaneously without interference.

## 4. Low Battery Alarm

The transmitter will beep and its light will flash when the aircraft's battery is low, indicating it's time to land and recharge.

*Image: Low battery alarm indication on the transmitter.*

## 5. Official Product Video

## MAINTENANCE

### 1. EPP Foam Durability

The aircraft is constructed from durable EPP foam, which is resilient to minor impacts. In case of damage, suitable foam-safe adhesive can be used for repairs.

### 2. Propeller Replacement

If a propeller is damaged, carefully pull it from the motor shaft. Replace it with an extra propeller, ensuring it's correctly oriented and securely attached.

### 3. Battery Charging

Use the provided USB charging cable to recharge the flight batteries. Connect the battery to the charger and plug the USB end into a suitable power source (e.g., computer USB port, USB wall adapter). The charging indicator will show the charging status.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Aircraft does not respond to remote control.	Low battery in aircraft or remote; improper binding; power switch off.	Charge aircraft battery; replace remote batteries; re-bind remote and aircraft; ensure aircraft power switch is on.
Aircraft drifts during flight.	Improper gyro calibration; wind interference; trim settings incorrect.	Recalibrate gyro on a horizontal surface; fly in calmer conditions; use digital trim buttons on the remote to adjust.
Propellers not spinning or spinning unevenly.	Damaged propeller; motor issue; loose connection.	Replace damaged propellers; check motor connections; contact support if motor issue persists.

## SPECIFICATIONS

- **Model:** EXA76206 (BF109)
- **Channels:** 3-Channel
- **Stabilization:** 6-axis Gyro Stabilizer
- **Material:** EPP Foam
- **Flight Time:** Up to 40 minutes (with two included batteries)
- **Radio System:** 2.4GHz
- **Product Dimensions:** 13 x 13 x 5 inches

- **Item Weight:** 1.08 pounds
- **Recommended Age:** 14 years and up

## WARRANTY & SUPPORT

For warranty information or technical support, please contact VOLANTEXRC customer service. Refer to the contact details provided on the product packaging or the official VOLANTEXRC website.
