## 6. TROUBLESHOOTING

---

### Common Issues and Solutions:

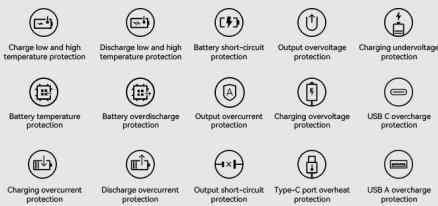

- **Power Bank Not Charging:**
  - Ensure the charging cable is securely connected to both the power bank's IN/OUT1 port and the wall charger.
  - Verify that the wall charger is functioning correctly and provides sufficient power (e.g., 45W for fast charging).
  - Try a different USB-C cable or wall charger.
- **Device Not Charging from Power Bank:**
  - Check if the power bank has sufficient charge (digital display should show above 0%).
  - Ensure the charging cable connecting your device to the power bank is compatible and securely connected.
  - Try a different output port on the power bank.
  - Some devices may require a specific charging protocol; ensure your device is compatible with PD (Power Delivery) or QC (Quick Charge) standards.
- **Slow Charging:**
  - Ensure you are using a high-quality cable that supports fast charging.
  - For laptops and other high-power devices, use the 65W USB-C (IN/OUT1) port.
  - If multiple devices are connected, the output power is shared, which may result in slower charging for individual devices.
  - Environmental factors (e.g., extreme temperatures) can affect charging speed.
