Operating Instructions

Power On/Off

Press and hold the Power button on the headset for a few seconds until you hear an audible prompt or see the LED indicator light up/turn off.

Volume Control

The headset features two independent volume wheels. The primary wheel typically controls overall game audio volume. The secondary wheel can be customized via the Swarm II app, but often controls game/chat mix or mic monitoring by default.

CrossPlay Switching

To switch between your Xbox and PC connection (if both transmitters are connected), press the dedicated CrossPlay button on the headset. This allows seamless transition between platforms.

Mode Button Functions

The Mode button's function can be remapped using the Swarm II app. Default functions may include cycling through EQ presets or activating Superhuman Hearing. Refer to the Swarm II app for current assignments and customization options.

Swarm II App Customization

Utilize the Swarm II app to fine-tune your audio experience. You can:

- Adjust the 10-band audio equalizer to create custom sound profiles.
- Modify microphone settings, including noise gate, sensitivity, and monitoring levels.
- Remap the functions of the wheel and mode button.
- Activate and adjust Advanced Superhuman Hearing.

Maintenance

Cleaning

To clean your headset, use a soft, dry cloth. For ear cushions, a slightly damp cloth with mild soap can be used, but ensure they are completely dry before use. Avoid using harsh chemicals or abrasive materials.

Storage

When not in use, store your headset in a cool, dry place away from direct sunlight and extreme temperatures. The lay-flat design allows for convenient storage. Avoid placing heavy objects on the headset.

Battery Care

To maximize battery lifespan, avoid fully discharging the headset frequently. Charge it regularly, even if not completely depleted. If storing for an extended period, charge the headset to approximately 50% before storage.

Troubleshooting

No Audio / Low Volume

- Ensure the headset is powered on and properly paired with the correct USB transmitter.
- Check both volume wheels on the headset and the system volume settings on your console/PC.

- Verify the correct audio output device is selected in your system's sound settings.
- If using Bluetooth, check the volume on your mobile device.

Microphone Not Working

- Ensure the microphone is flipped down to unmute.
- Check microphone input settings on your console/PC and ensure the headset is selected as the default input device.
- Perform a firmware update via the Swarm II app, as this often resolves mic issues.
- Adjust mic sensitivity and noise gate settings in the Swarm II app.

Connectivity Issues

- Ensure the correct USB transmitter is inserted for your desired platform.
- Try re-pairing the headset with the transmitter. Power off both, then power on the headset and hold the pairing button on the transmitter (if available) or follow the Quick Start Guide's pairing steps.
- Move closer to the transmitter to rule out range issues.
- Avoid interference from other wireless devices.

Factory Reset

If you experience persistent issues, a factory reset may help. Refer to the Turtle Beach support website or the Swarm II app for specific instructions on how to perform a factory reset for your Stealth 700 Gen 3 headset. This can often resolve software-related glitches or incorrect settings.
