- 1. Extend the Brush:** Press the easy-to-press button on the handle and gently pull the barbed end of the brush to extend it to the desired length. The brush can extend up to 43 cm (16.92 inches).
- 2. Insert into Drain:** Carefully insert the barbed end of the brush into the clogged drain opening.
- 3. Rotate and Push:** Once inserted, gently rotate and push the brush further into the drain until you feel resistance, indicating the blockage.

## 6. MAINTENANCE

Proper maintenance will extend the life of your drain cleaning brush:

- After each use, clean any debris from the barbs and the shaft. Rinse the brush with clean water.
- Ensure the brush is completely dry before retracting and storing it to prevent mildew or odor.
- Store the brush in its coiled, compact form in a dry place away from direct sunlight and high temperatures.
- Do not use abrasive cleaners, steel wool, or sharp objects to clean the brush, as this can damage the material.

## 7. TROUBLESHOOTING

If you encounter issues while using the drain cleaning brush, consider the following:

- **Brush not clearing blockage:** The blockage might be too large or too far down the pipe for the brush's length. Try to clear it in smaller sections, or consider if a professional plumber is needed for very severe clogs.
- **Brush difficult to retract:** Ensure the shaft is clean and free of debris. Do not force retraction; gently guide it while pressing the button.
- **Barbs appear damaged:** Avoid using excessive force when pulling the brush, especially with stubborn clogs. If barbs are significantly damaged, the effectiveness of the brush may be reduced, and replacement might be necessary.
