Initial Operation

Before loading food, allow the refrigerator to run for approximately 2-3 hours on the highest temperature setting. An "OK" indicator, typically located on the right side above the vegetable drawer, will appear once the optimal operating temperature is reached. After this initial period, set the temperature to your desired level (e.g., between setting 2 and 3) before filling the appliance.

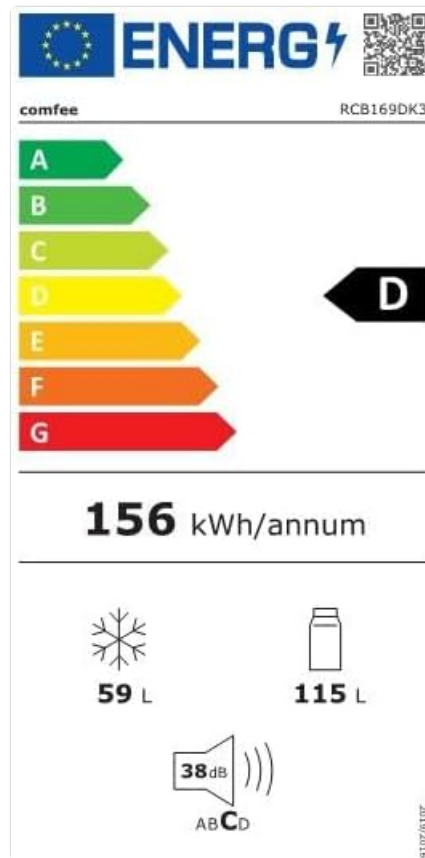

Door Reversal

The door hinges are reversible, allowing you to change the opening direction of the refrigerator and freezer doors to suit your kitchen layout. This process requires careful attention and may involve pre-drilled holes that need to be cleared. Consult a qualified technician if you are unsure about performing this procedure.

OPERATING INSTRUCTIONS

Temperature Control

The refrigerator features an adjustable temperature control, allowing you to set the cooling level from "cold" to "coldest" to ensure your food remains fresh and frozen items stay frozen. The control is typically a rotary dial or digital setting inside the refrigerator compartment.

LED Lighting

The refrigerator compartment is equipped with bright LED lighting, illuminating the interior for easy visibility of contents, even in low light conditions. When the temperature control is set to "Zero" or "Off", the light will also turn off, saving energy during defrosting or extended periods of non-use.

MAINTENANCE

Cleaning

Regular cleaning helps maintain the efficiency and hygiene of your appliance. Always unplug the refrigerator before cleaning.

- Clean the interior with a soft cloth and a mild, non-abrasive detergent.
- Wipe down exterior surfaces with a damp cloth.

- Clean the door seals regularly to ensure a tight seal.
- Dust the condenser coils at the back of the appliance periodically to improve energy efficiency.

Defrosting

This refrigerator features Low Frost technology, which significantly reduces ice build-up in the freezer compartment, making manual defrosting less frequent and easier. When defrosting is necessary, unplug the appliance and allow the ice to melt naturally. Do not use sharp objects to remove ice.
