## 7. TROUBLESHOOTING

---

If you encounter issues with your desk frame, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Desk does not move or respond to controls.	Power disconnected, cable loose, child lock engaged.	Check power cable connection. Ensure all motor cables are securely plugged into the control box. Disengage child safety lock if active.
Desk moves unevenly or makes unusual noise.	Overload, loose connections, uneven weight distribution.	Reduce load on the desk (ensure it's below 180 kg). Check all assembly screws for tightness. Redistribute weight evenly on the desktop.
Error code displayed on control panel.	Specific system fault.	Refer to the detailed assembly manual for specific error code meanings and troubleshooting steps. Often, a power cycle (unplug for 30 seconds, then replug) can resolve minor errors.
Anti-collision system triggers too easily or not at all.	Sensitivity setting, sensor obstruction.	Ensure no objects are near the sensors. Some models allow sensitivity adjustment; refer to your detailed manual.

If the problem persists after attempting these solutions, please contact MAIDeSITe customer support.
