INSTALLATION (SETUP)

The Saillong Replacement Boat Stern Light Cover Lens Cap features an effortless screw-on design for quick and easy installation. No special tools or professional assistance are required.

1. **Preparation:** Ensure the boat's power to the stern light is turned off before beginning installation to prevent electrical hazards.
2. **Remove Old Cover:** Gently unscrew the existing, old, cracked, or yellowed lens cover from the stern light fixture. Dispose of the old cover responsibly.

3. **Inspect Fixture:** Check the light fixture for any debris, corrosion, or damage. Clean the threads if necessary to ensure a smooth installation of the new cover.
4. **Install New Cover:** Align the threads of the Saillong Replacement Lens Cap with the threads on the stern light fixture. Carefully screw the new cover onto the fixture until it is snug. Do not overtighten.
5. **Test:** Restore power to the stern light and verify that the light functions correctly and the new cover is securely in place.

OPERATING PRINCIPLES

The Saillong Replacement Boat Stern Light Cover Lens Cap functions as a protective and light-diffusing component for your boat's all-round navigation light. Its frosted, translucent design ensures a 360-degree spread of light, crucial for marine safety and compliance with navigation regulations.

- **Enhanced Visibility:** The frosted globe diffuses the light evenly, providing improved brightness and visibility from all

angles without creating harsh glare. This is essential for safe navigation, especially during dusk, dawn, or low visibility conditions.

- **Protection:** The durable plastic material protects the internal light bulb from environmental elements such as water, salt spray, and UV radiation, extending the lifespan of the bulb and the light fixture.
- **Waterproof Design:** The secure screw-on fit contributes to the waterproof integrity of the light assembly, preventing water ingress that could damage electrical components.

CLEAR STERN LIGHT COVER ENHANCED VISIBILITY

MAINTENANCE

The Saillong Replacement Boat Stern Light Cover Lens Cap requires minimal maintenance to ensure optimal performance and longevity.

- **Regular Cleaning:** Periodically wipe the exterior of the lens cover with a soft, damp cloth to remove salt residue, dirt, and grime. Avoid abrasive cleaners or harsh chemicals that could scratch or damage the plastic.
- **Inspection:** Regularly inspect the lens cover for any signs of cracking, yellowing, or physical damage. While designed for durability, prolonged exposure to harsh marine environments can eventually lead to wear.
- **Secure Fit:** Occasionally check that the lens cover remains securely screwed onto the light fixture. Vibrations from boat operation can sometimes loosen components over time.

TROUBLESHOOTING

While the Saillong Replacement Boat Stern Light Cover is a simple component, here are some common issues and their resolutions:

Problem	Possible Cause	Solution
Light appears dim or uneven.	Accumulation of dirt/salt on the lens, or the internal bulb is failing.	Clean the lens cover thoroughly. If the issue persists, inspect and replace the light bulb if necessary.
Water inside the light fixture.	Lens cover not screwed on tightly, or the gasket (if present on the fixture) is compromised.	Ensure the lens cover is securely tightened. If water still enters, inspect the light fixture's gasket and replace if damaged.

Lens cover feels loose after installation.	Not tightened sufficiently, or threads on fixture are worn.	Gently tighten the lens cover. If it continues to loosen, inspect the threads on your light fixture for wear.
