EMKE Duschfilter

EMKE Shower Filter Instruction Manual

Model: Duschfilter (Compatible with EMKE F11 and F22 Thermostats)

INTRODUCTION

Thank you for choosing the EMKE Shower Filter. This manual provides essential information for the proper installation, operation, and maintenance of your new shower filter. Designed to effectively remove chlorine and other impurities, this PP cotton filter ensures a cleaner and healthier showering experience. Please read these instructions carefully before use and retain them for future reference.

This filter is specifically designed for compatibility with EMKE F11 and F22 thermostat models.

PRODUCT OVERVIEW

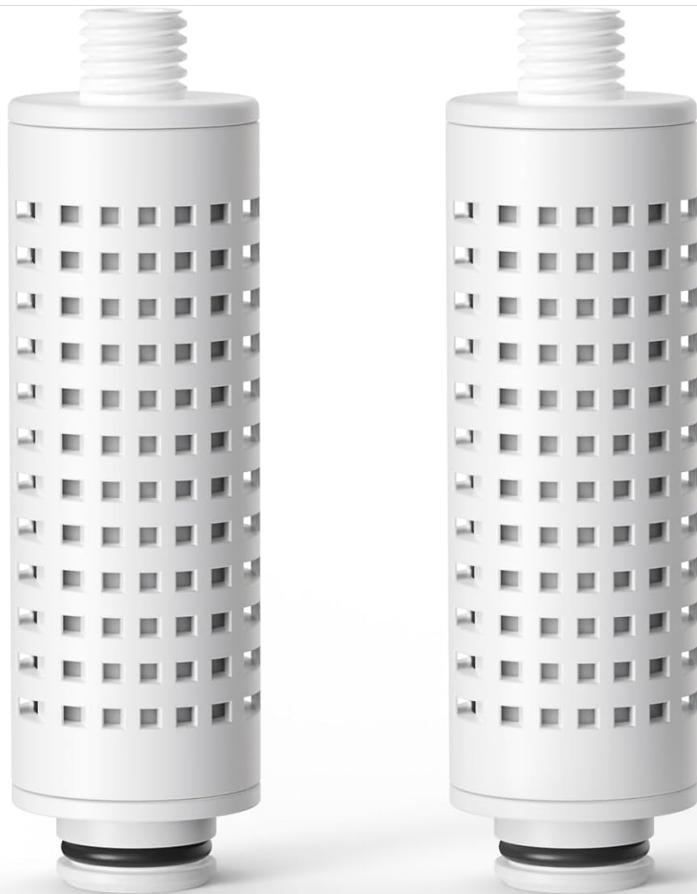

Image: Two EMKE PP cotton shower filters, highlighting their white cylindrical form and the numerous small perforations designed for water filtration. Each filter has a threaded top and a rubber seal at the bottom for secure installation.

The EMKE Shower Filter utilizes a high-quality PP cotton material to filter out chlorine, heavy metals, and other impurities from your shower water. Its durable and waterproof construction ensures excellent sealing, preventing leaks and drips. Regular use helps protect your shower system from limescale deposits, especially in hard water areas, and contributes to improved water quality for your skin and hair.

SETUP AND INSTALLATION

Installing the EMKE Shower Filter is a straightforward process. Please follow these steps carefully to ensure proper function and prevent leaks.

- 1. Prepare for Installation:** Ensure you have the new EMKE shower filter and any necessary tools (e.g., wrench if connections are tight).
- 2. Turn Off Water Supply:** Locate the main water valve for your shower or the entire bathroom and turn it off. This is crucial to prevent water leakage during filter replacement.
- 3. Remove Old Filter (if applicable):** If replacing an existing filter, carefully unscrew and remove the old filter cartridge from its housing. Be prepared for some residual water to drain.
- 4. Insert New Filter:** Align the new EMKE shower filter with the housing. Gently screw it into place. Ensure it is seated correctly and not cross-threaded.
- 5. Tighten Securely:** Hand-tighten the filter until snug. If necessary, use a wrench for a final quarter-turn, but do not overtighten, as this can damage the seals or housing.

6. **Restore Water Supply:** Slowly turn the main water valve back on. Check for any leaks around the filter connections. If leaks occur, turn off the water, re-tighten the filter, and check again.
7. **Flush the Filter:** Run the shower for a few minutes to flush out any air or loose carbon particles from the new filter. The water may appear cloudy initially, which is normal and will clear up.

OPERATING INSTRUCTIONS

Once installed, the EMKE Shower Filter operates automatically with your shower system. No special actions are required for its daily function.

- **Water Flow:** The filter is designed to maintain optimal water flow while effectively filtering impurities.
- **Compatibility:** This filter is compatible with EMKE F11 and F22 thermostat models. Ensure your shower system is one of these models for proper integration.
- **Initial Use:** After installation, run cold water through the shower for 2-3 minutes to flush the filter and remove any air or loose particles.

MAINTENANCE

Regular maintenance, primarily filter replacement, is crucial for the continued effectiveness of your EMKE Shower Filter.

- **Filter Replacement Interval:** It is recommended to change the PP cotton filter every 3 to 6 months. This interval may vary depending on your local water quality and frequency of use.
- **Visual Indicator:** The filter features a visual display that helps you determine its status. As the filter ages and collects impurities, its appearance will change, indicating when a replacement is due.
- **Replacement Procedure:** Follow the installation steps outlined in the "Setup and Installation" section to replace the old filter with a new one. Always turn off the water supply before attempting replacement.

It also includes a visual progression of a filter from 'Brand New' to '2-3 Months Old' to '4-6 Months Old', recommending replacement every 3-6 months, with a disclaimer that this may vary based on water quality.

TROUBLESHOOTING

- **Reduced Water Flow:**
 - **Cause:** Filter is clogged with impurities.
 - **Solution:** Replace the filter cartridge.
- **Leaks at Connections:**
 - **Cause:** Filter not tightened sufficiently or seals are improperly seated/damaged.
 - **Solution:** Turn off water supply, check that the filter is correctly aligned and tightened. Inspect rubber seals for damage and replace if necessary. Do not overtighten.
- **Water Still Appears Cloudy/Smells:**
 - **Cause:** New filter not adequately flushed, or filter is expired/ineffective.
 - **Solution:** Run water for a longer period to flush. If the issue persists, ensure the filter is new and correctly installed. Consider replacing the filter if it's nearing its recommended lifespan.
