

## Solareye TCYW

# Solareye Wildlife Camera User Manual

Model: TCYW

## INTRODUCTION

This manual provides detailed instructions for the setup, operation, maintenance, and troubleshooting of your Solareye Wildlife Camera (Model TCYW). Please read this manual thoroughly before using the camera to ensure optimal performance and longevity.

The Solareye Wildlife Camera is designed for outdoor use, featuring 2.7K video recording, 48MP photo resolution, and advanced night vision capabilities. It offers multiple power options, including an integrated solar panel, a built-in 5000mAh lithium battery, and support for AA batteries, ensuring continuous operation in various environments. Its IP66 waterproof rating makes it suitable for diverse weather conditions.

## PACKAGE CONTENTS

Upon opening the package, verify that all the following items are included:

- Solareye Wildlife Camera
- Solar Panel
- 32GB SD Card
- Mounting Strap
- USB-C Cable
- Mounting Brackets
- Metal Base
- Screws
- Rubber Plugs
- User Manual

## Schritte zur Verbindung mit der App „Trailcam Go“

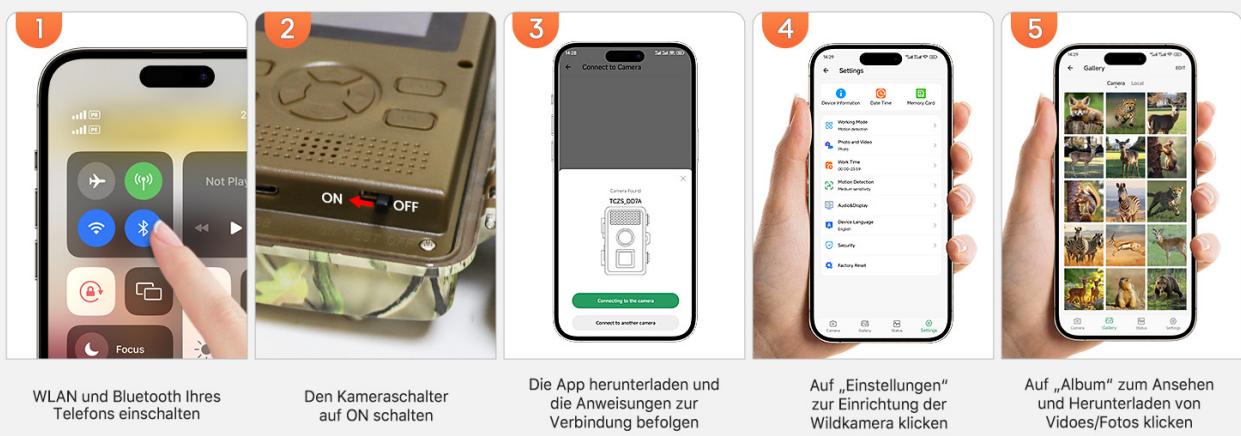

Figure 1: Included components of the Solareye Wildlife Camera package.

## SETUP

### 1. Power Supply Options

The Solareye Wildlife Camera offers three power supply methods:

- Integrated Solar Panel:** The camera features a built-in 5000mAh lithium battery that can be continuously charged by the external 3W solar panel. This is the primary recommended power source for long-term outdoor deployment.
- USB-C Cable:** The camera's internal battery can be recharged using the provided USB-C cable and a compatible power adapter (not included).
- AA Batteries:** For emergency backup or in situations where solar charging is not feasible, 4 AA batteries (not included) can be inserted.

Figure 2: Power supply options for the Solareye Wildlife Camera.

Figure 3: Solar panel providing continuous power to the camera.

## 2. Inserting SD Card and Batteries

Before initial use, ensure the SD card is inserted and power is supplied.

1. Open the camera casing.
2. Insert the provided 32GB SD card into the designated slot. Ensure it clicks into place.
3. If using AA batteries, insert 4 AA batteries into the battery compartment, observing correct polarity.
4. Close the camera casing securely to maintain its IP66 waterproof rating.

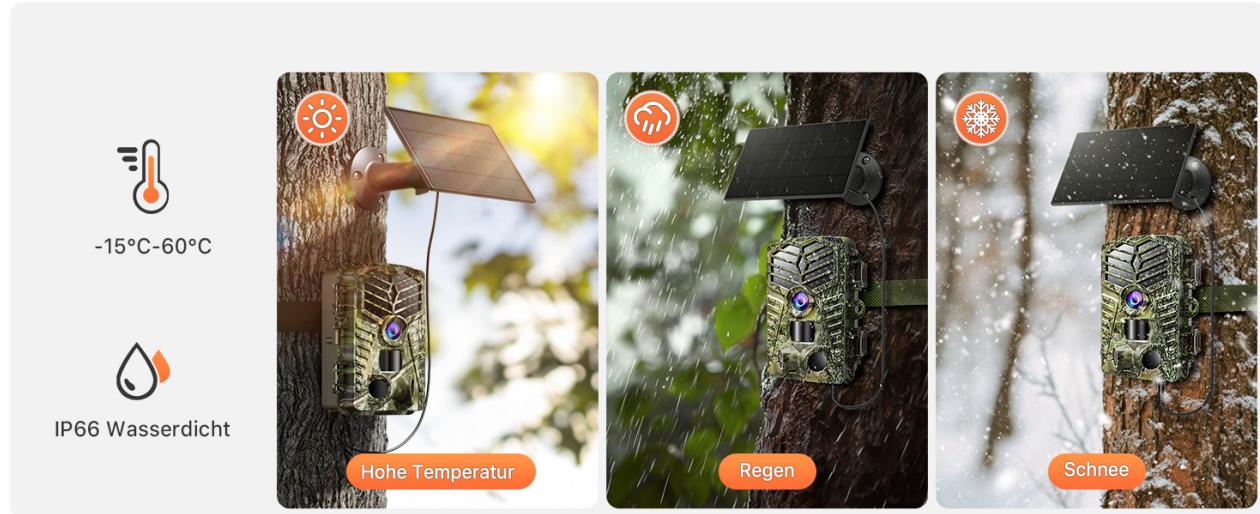

Figure 4: Steps for battery and SD card installation.

### 3. Mounting the Camera

The camera can be mounted using the provided strap or mounting brackets.

- **Strap Mounting:** Thread the mounting strap through the slots on the back of the camera and secure it around a tree or pole.
- **Bracket Mounting:** Use the metal base, screws, and rubber plugs to attach the mounting brackets to a desired surface. Then, secure the camera to the brackets. The ball joints on the brackets allow for flexible adjustment of the camera's angle.

Position the camera to ensure the solar panel receives adequate sunlight throughout the day for optimal charging. Consider the 120° detection angle and 25-meter detection distance when choosing a location.

## OPERATING INSTRUCTIONS

## 1. Camera Modes

The camera has three main modes controlled by a switch inside the casing:

- **OFF:** Camera is powered off.
- **TEST:** The screen lights up, allowing you to set operating mode, parameters, and view images/videos. In this mode, the camera will not record automatically.
- **ON:** After a 10-second countdown, the screen turns off, and the camera enters motion detection mode, ready to record.

**Note:** For first-time use, set the switch to TEST to configure settings like video/photo resolution and other parameters before switching to ON.

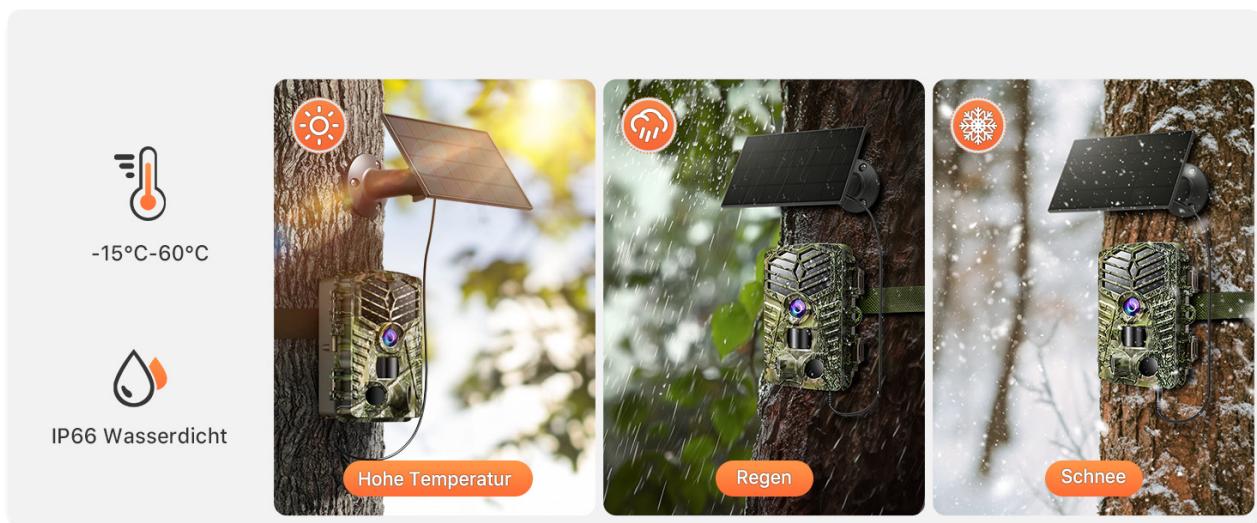

Figure 7: Camera mode switch and functions.

## 2. Connecting to the "Trailcam Go" App

The camera can be connected to your smartphone via Wi-Fi and Bluetooth for remote access and control within a 15-meter range. **Note: The camera does not support connection to home routers.**

1. Enable Wi-Fi and Bluetooth on your smartphone.
2. Switch the camera to the ON position.
3. Download the "Trailcam Go" app from your smartphone's app store.
4. Follow the in-app instructions to connect to the camera.
5. Once connected, click on "Settings" in the app to configure camera parameters.
6. Access the "Album" section to view and download recorded videos and photos.

Figure 9: Step-by-step guide for app connection.

### 3. Recording Features

- **Photo Resolution:** 48MP

- **Video Resolution:** 2.7K
- **Trigger Speed:** 0.2 seconds, ensuring quick capture of moving subjects.
- **Photo Burst:** 1-5 photos per trigger.
- **Night Vision:** Equipped with 40-940nm non-glowing infrared lights for clear black-and-white images at night without disturbing animals. Night vision range is up to 20 meters.
- **Fill Light Technology:** Prevents overexposure or excessive dimming in night recordings.
- **Other Functions:** Time-lapse recording, timed recording, continuous shooting, audio recording, and password protection.

## Schnelle Installation

4 Batterien einlegen (optional)

SD Karte einlegen

Auf „TEST“ zum Einstellen der Kameraparameter schalten

### Einfache Bedienung

<b>OFF</b>	Kamera ausschalten
<b>Test</b>	Der Bildschirm leuchtet auf und Sie können den Arbeitsmodus, Parameter usw. einstellen und Videos/Fotos ansehen.
<b>ON</b>	Warten Sie 10 Sekunden, bis sich der Bildschirm ausschaltet und die Kamera in den Bewegungserkennungsmodus wechselt.
<b>Hinweis</b>	Wenn Sie es zum ersten Mal verwenden, schalten Sie bitte zuerst auf TEST, stellen Sie die Kamerabetriebszeit, den Arbeitsmodus, die Video-/Fotoauflösung und andere Parameter ein, schalten Sie dann auf "ON" und die Wildkamera wechselt in den Arbeitsmodus und der Bildschirm geht aus.

## MAINTENANCE

- **Cleaning:** Regularly clean the camera lens and solar panel with a soft, dry cloth to ensure clear images and efficient charging.
- **Battery Check:** Periodically check the battery level via the app or on the camera's internal screen. Recharge or replace AA batteries as needed.
- **SD Card Management:** Format the SD card regularly to prevent data corruption and ensure optimal recording performance. Back up important footage before formatting. The camera supports loop recording, overwriting the oldest files when the SD card is full.
- **Environmental Protection:** The camera is IP66 waterproof, making it resistant to rain, snow, and dust. However, avoid submerging the camera in water. Ensure the casing is securely closed at all times.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Camera not turning on.	Low battery or no power. Incorrect battery insertion.	Ensure the solar panel is exposed to sunlight, recharge via USB-C, or insert fresh AA batteries with correct polarity.
Cannot connect to the app.	Wi-Fi/Bluetooth not enabled on phone. Camera not in ON mode. Out of 15m range. Attempting to connect to home router.	Ensure phone's Wi-Fi and Bluetooth are on. Set camera to ON. Move closer to the camera (within 15 meters). Remember, router connection is not supported.
Poor image/video quality at night.	Lens dirty. Subject too far. Obstruction in front of IR lights.	Clean the lens. Ensure subjects are within 20m night vision range. Clear any obstructions.
Camera not recording motion.	PIR sensor obstructed. Sensitivity settings too low. Camera in TEST mode.	Ensure PIR sensors are clear. Adjust PIR sensitivity in settings. Switch camera to ON mode.
SD card error.	SD card full, corrupted, or incompatible.	Format the SD card (back up data first). Try a different compatible SD card (up to 128GB).

## SPECIFICATIONS
