1. OVERVIEW

The Anbull CUF-6005 Replacement Pond Filter Sponges are designed to maintain clear and healthy water in your pond. These high-quality filter media effectively remove fine particles and debris, contributing to a balanced aquatic environment. This manual provides essential information for the proper installation, use, and maintenance of your replacement filter sponges.

2. PRODUCT FEATURES

- **Effective Filtration:** Designed to filter out fine particles, ensuring crystal clear pond water.
- **Biological Filtration Support:** Bio sponges provide a surface area for beneficial bacteria to colonize, aiding in biological filtration.
- **Reusable Design:** Sponges can be rinsed and reused, extending their lifespan.
- **Customizable Fit:** Pads can be cut to fit various aquarium, fish tank, or pond filter systems.
- **Dimensions:** Each sponge measures approximately 7.08 inches x 9.44 inches x 1.18 inches.
- **Quantity:** Each package contains two replacement filter pads.

3. COMPATIBILITY

These replacement filter sponges are specifically compatible with the **Anbull CUF-6005 Pond Filter Pump 925gal/50w 660GPH**. They are designed as a direct replacement for the original filter media in this model. While they can be cut to fit other systems, optimal performance is ensured when used with the specified Anbull CUF-6005 pump.

4. INSTALLATION INSTRUCTIONS

Follow these steps to replace the filter sponges in your Anbull CUF-6005 Pond Filter Pump:

1. **Disconnect Power:** Always unplug the pond filter pump from the power source before performing any maintenance or installation.
2. **Remove Filter Housing:** Carefully open or unlatch the filter housing of your Anbull CUF-6005 pump

according to its specific design. Refer to your pump's manual if unsure.

3. **Remove Old Sponges:** Take out the old, used filter sponges. Dispose of them properly.
4. **Clean Filter Housing:** It is recommended to clean the inside of the filter housing and any other components (like impellers or UV lamps, if present) before inserting new sponges.
5. **Insert New Sponges:** Place the new Anbull replacement filter sponges into the designated compartments within the filter housing. Ensure they fit snugly without being overly compressed. If necessary, the sponges can be carefully cut to achieve a perfect fit.
6. **Secure Filter Housing:** Close and secure the filter housing, ensuring all latches or seals are properly engaged to prevent leaks.
7. **Reconnect Power:** Once the filter is reassembled and secured, plug the pond filter pump back into the power source.
8. **Monitor Operation:** Observe the pump's operation for a few minutes to ensure proper water flow and no leaks.

5. MAINTENANCE

Regular maintenance of your filter sponges is crucial for optimal pond health and water clarity.

- **Regular Cleaning:** Periodically remove the filter sponges and rinse them thoroughly with pond water (not tap water, as chlorine can kill beneficial bacteria). Gently squeeze out accumulated debris until the water runs clearer.
- **Cleaning Frequency:** The frequency of cleaning depends on the pond's bioload, fish population, and amount of debris. Typically, sponges should be cleaned every 2-4 weeks, or when you notice a reduction in water flow from the pump.
- **Replacement:** While reusable, filter sponges will eventually degrade or become too clogged to clean effectively. It is recommended to replace them every 3-6 months, or sooner if they show signs of wear, tear, or significant compaction.
- **Do Not Over-Clean:** Avoid excessive scrubbing or harsh cleaning agents, as this can damage the sponge material and remove beneficial bacteria.

6. TROUBLESHOOTING

If you encounter issues related to your pond filter system after installing new sponges, consider the following:

- **Reduced Water Flow:**
 - Ensure the sponges are not overly compressed or blocking the water intake/outlet.
 - Check if the sponges are already clogged with debris; they may require cleaning.
 - Verify that the pump impeller is clean and free of obstructions.
- **Cloudy Water:**
 - New sponges may take a few days to establish a full biological filter.
 - Ensure the sponges are correctly installed and water is flowing through them.
 - Check if the pond is overstocked or if there's excessive feeding, leading to high organic load.
 - Consider if the sponges need cleaning or replacement if they are old.
- **Sponges Don't Fit:**
 - Confirm you have the correct replacement sponges for your specific Anbull CUF-6005 model.
 - The sponges are designed to be cut if needed to fit various filter compartments. Use a sharp utility

knife for clean cuts.

7. SPECIFICATIONS

Attribute	Detail
Brand	Anbull
Model Name	Filter Sponges (CUF-6005 Compatible)
Item Model Number	2 (referring to quantity per pack)
Dimensions (Each Sponge)	7.08 x 9.44 x 1.18 inches (180 x 240 x 30 mm)
Item Weight	1.44 ounces (per pack of 2)
Color	Blue
Number of Items	2
Specific Uses for Product	Filter for pond pumps
Compatible Pump	Anbull CUF-6005 Pond Filter Pump 925gal/50w 660GPH

8. WARRANTY AND SUPPORT

Warranty: This product comes with a **1 Year Manufacturer Warranty**. Please retain your proof of purchase for any warranty claims.

Customer Support: For technical assistance, warranty inquiries, or questions regarding your Anbull replacement filter sponges, please contact Anbull customer support through their official website or the retailer where the product was purchased. Provide your product model number (CUF-6005) and purchase details for faster service.
