2. Safety Information

- **Proper Voltage:** Ensure the wall outlet voltage matches the adapter's input requirements (100-240V AC).
- **Avoid Overloading:** Do not overload the power outlet.
- **Handle with Care:** Do not drop, disassemble, or attempt to repair the adapter. Refer servicing to qualified personnel.

5. Operating Instructions

Once properly connected, the adapter will begin to supply power to your vacuum cleaner or charge its battery. The charging indicator on your vacuum cleaner (if available) will typically illuminate to show that charging is in progress.

- **Charging Time:** Refer to your MBYULO vacuum cleaner's manual for specific charging times.
- **Important Note on Voltage:** The 29.6V specification often seen for the vacuum refers to the vacuum's internal battery voltage, **NOT** the charger's output voltage. This adapter provides the correct 36V output required by the vacuum's charging system.
- **Battery Lifespan:** Rechargeable batteries have a finite lifespan, typically 1 to 3 years. If your vacuum's battery is old or degraded, it may not accept a charge, which is a battery issue, not an adapter malfunction.

6. Maintenance

- **Cleaning:** Disconnect the adapter from the power outlet and the vacuum cleaner before cleaning. Wipe the adapter with a

dry, soft cloth. Do not use liquid cleaners or solvents.

- **Storage:** Store the adapter in a cool, dry place when not in use. Avoid wrapping the cable too tightly around the adapter to prevent damage.
- **Inspection:** Periodically inspect the adapter and its cable for any signs of damage, such as cuts, fraying, or bent pins. Discontinue use if damage is found.

7. Troubleshooting

- **Vacuum not charging/powering on:**
  - Ensure the adapter is securely plugged into both the wall outlet and the vacuum cleaner.
  - Check if the wall outlet is functional by plugging in another device.
  - Inspect the adapter cable and connectors for any visible damage.
  - If the vacuum's battery is old, it might no longer hold a charge. Consider replacing the vacuum's battery if applicable.
- **Adapter feels warm:** It is normal for the adapter to feel slightly warm during operation. If it becomes excessively hot or emits a burning smell, unplug it immediately and discontinue use.
