## 5. SETUP

### Freestanding Installation (with wheels)

1. Carefully unpack the heater and all accessories.
2. Attach the universal wheels to the designated slots at the bottom of the heater. Ensure they click securely into place.
3. Place the heater on a flat, stable surface, ensuring it is at least 3 feet (0.9 meters) away from any walls or combustible materials.

### Wall Mount Installation

1. Identify a suitable wall location, ensuring it is a safe distance from combustible materials and has a power outlet nearby.
2. Using the provided wall mounting accessories (brackets, screws, anchors), securely attach the heater to the wall. Follow the instructions provided with the mounting kit for precise

measurements and drilling.

3. Ensure the heater is level and firmly secured before plugging it in.

## 6. OPERATING INSTRUCTIONS

1. **Power On:** Plug the heater directly into a standard 120V AC electrical outlet.
2. **Select Power Level:** Use the lower knob switch to select the desired heating power:
  - **I (Half Power):** For lower heat output and energy saving.
  - **II (Full Power):** For maximum heat output (1500W) and faster heating.
3. **Set Temperature:** Use the upper knob switch to adjust the thermostat. Rotate the knob clockwise to increase the desired temperature and counter-clockwise to decrease it. The heater will cycle on and off to maintain the set temperature.
4. **Power Off:** To turn off the heater, rotate the lower power knob to the "O" (Off) position and unplug the unit from the wall outlet.

## TEMPERATURE REGULATION

## 7. MAINTENANCE

Regular maintenance ensures optimal performance and longevity of your heater.

- **Cleaning:** Always unplug the heater and allow it to cool completely before cleaning. Use a soft, damp cloth to wipe the exterior surfaces. Do not use abrasive cleaners or solvents.
- **Storage:** When not in use, store the heater in a cool, dry place. Utilize the power cord storage area to keep the cord tidy.
- **No Internal Maintenance:** The heater does not require internal lubrication or maintenance. Do not attempt to open or repair the unit yourself.

## 8. TROUBLESHOOTING

If you experience issues with your heater, refer to the following common problems and solutions:

- **Heater does not turn on:**

- Ensure the power cord is securely plugged into a working 120V outlet.
- Check if the power knob is set to 'I' or 'II' and the thermostat knob is set to a temperature higher than the ambient room temperature.
- Verify that the circuit breaker has not tripped.
- Check for tip-over protection activation; ensure the heater is on a stable, level surface.

- **Heater produces insufficient heat:**

- Ensure the power setting is on 'II' (Full Power).
- Increase the thermostat setting.
- Ensure the room size is within the recommended heating coverage (up to 300 sq ft).
- Check for drafts or open windows/doors that may be affecting heat retention.

- **Heater suddenly turns off:**

- This may be due to the overheat protection. Unplug the heater, allow it to cool for 30 minutes, and check for any obstructions around the air vents.
- The anti-tip protection may have activated. Ensure the heater is upright and on a stable surface.
- The thermostat may have reached the set temperature. The heater will cycle on and off to maintain the temperature.

If the problem persists after attempting these solutions, please contact customer support.
