BANCO DE PRUEBAS

por Josep Armengol

Reproductor WiiM Amp Pro

Reproductor digital y amplificador con muchas posibilidades y excelente rendimiento: la nueva estrella de WiiM.

H

ace unos meses tuvimos la oportunidad de probar el WiiM Amp, y ahora nos llega este "Pro", de forma gratuita. Es lo que se puede decir un reproductor en amplificador, así que cambiando una pila del WiiM Pro a Pro Plus, la marca ha optimizado el circuito interno y los componentes usados para dar un salto de prestaciones musicales. Una obra de la precisión, como ha dicho, cuando se pequeño pero capaz WiiM Amp, de normal a Pro, baja la potencia de 40 a 100 dB con una salida máxima de 5 vatios (dicho de otra forma baja de 0.00233 a 0.00233).

Recordemos que la americana WiiM (de Linsley Technology) aunque todavía es relativamente nueva en este mundo, tiene patentes que tienen años, diseñando productos para otros reproductores musicales, y ya ha revolucionado el mercado con los reproductores y ahora, más, con estas cajas llenas de truco.

Descripción

Por fuera el WiiM Pro es idéntico a su antecesor, que de momento se mantiene en el mercado y presenta algunas variaciones de 19 centímetros de alto y poco más de 8 cm de ancho. Un LED indica si está en modo de sueño, y una fila de LED dan idea del nivel de volumen, que podemos ajustar directamente por el control giratorio del frontal. El mando a distancia de más ideas de lo que se ve en este aparato, mando por cinco canales, no infrarrojo, no hace falta apuntar al aparato, ni siquiera está en la misma habitación, para que funcione. Puede via más opciones, y despliega todo su potencial, si usamos su aplicación dedicada iOS o Android, como alternativa remota. Por dentro el Amp Pro incluye dos cambios importantes respecto del Amp a socas monta

en diseño de la convertida DAC, pasando del SSM2602 al ESS9018, su tipo de gama, y que permite pasar de una relación señal-ruido (por la salida de línea) de 108 dB hasta unos niveles 120 dB, al nivel del WiiM Ultra (que también hemos probado). El otro cambio está en la salida de altavoces en su mismo chip amplificador en eficiente clase D (un Texas Instruments TPA3255 que así trabaja tipo de sus límites pero en este "Pro" se añade una sección de salida con otro filtro y diferente implementación, que bajan la distorsión en los altavoces. Lo hacen Post Filter Feedback (PFFB) y además permite trabajar con cajas más difíciles, y la potencia que siendo de 40 W (a 8 ohmios) llega a 8 ó 4 ohmios).

Depende de la misma control, pero suficientes, conexiones que el WiiM Amp: una entrada analógica RCA por si queremos conectar alguna fuente externa (podría ser en teoría digital con fibra, dos digitales: Espo y HDMI ARC) y una salida para subwoofer además de las de altavoces. Menos ajuste interno la versión configuración si conectamos ese cable de fibra, pero podemos decir la presencia de este puerto se usamos cajas grandes o más si los monitores pequeños) y controla su nivel relativo. Y así eliminamos los "trazos" que comentábamos más arriba, porque además disponemos de un programa de recalibración o corrección de sala sorprendentemente
