## 5. MAINTENANCE

---

### 5.1 Cleaning

Regular cleaning is essential to maintain hygiene and performance. Always unplug the unit before cleaning. Wipe down the interior and exterior surfaces with a soft cloth dampened with mild soap and water. The anti-corrosion embossed aluminum sheet interior and stainless steel exterior are designed for easy cleaning. Avoid using harsh chemicals or abrasive materials that could damage the surfaces.

## 5.2 Automatic Defrost

This appliance features an automatic defrost system, eliminating the need for manual defrosting. During the defrost cycle, frost on the evaporator coils will melt and drain into an evaporation pan, where it is naturally evaporated.

## 5.3 Condenser Coil Cleaning

Periodically clean the condenser coils located at the rear or bottom of the unit. Dust and debris can accumulate on the coils, reducing cooling efficiency. Use a soft brush or vacuum cleaner to gently remove any buildup. Ensure the unit is unplugged before performing this maintenance.

## 6. TROUBLESHOOTING

---

If you experience issues with your Coolski beverage refrigerator, please refer to the following common troubleshooting tips:

Problem	Possible Cause	Solution
Unit does not power on	No power supply; power button off	Check power outlet and circuit breaker. Ensure the red power button is pressed.
Temperature is not cold enough	Door not closed properly; thermostat set too high; poor ventilation; overloaded with warm items	Ensure doors are fully closed. Adjust thermostat to a lower setting. Check for proper air circulation. Avoid overloading.
Excessive noise	Unit not level; fan obstruction	Adjust leveling feet. Check for any obstructions around the fan.
Water on floor (leakage)	Drain tube clogged or dislodged	Inspect and clear the drain tube. Ensure it is correctly positioned in the evaporation pan.

If the problem persists after attempting these solutions, please contact Coolski customer support for assistance.
