SKMEI 9271

SKMEI 9271 Men's Automatic Analog Watch User Manual

Model: 9271

INTRODUCTION

Thank you for choosing the SKMEI 9271 Men's Automatic Analog Watch. This timepiece combines classic design with reliable automatic movement. This manual provides essential information for the proper setup, operation, and maintenance of your watch to ensure its longevity and accurate performance.

SETUP AND INITIAL WINDING

Your SKMEI 9271 watch features an automatic mechanical movement, meaning it is powered by the motion of your wrist. If the watch has stopped or is running slowly, it requires initial winding.

1. **Initial Winding:** If the watch is not working, gently push the crown all the way in and rotate it in an upward direction 15-20 times. This will provide sufficient power to start the movement.
2. **Setting the Time:** Pull the crown out to the first position. Rotate the crown to adjust the hour and minute hands to the correct time. Once set, push the crown back in fully to engage the movement.

Note: If You Receive Watch In Non Working Condition Just **Wind the Crown**

CROWN PULL-OUT
Adjust Time

TO WIND THE CROWN

Push the crown all the way in and rotate it in upwards direction 15-20 times

Manual winding is required at every 24 hours to keep watch continuously working.

Never wind crown whilst the watch is on your wrist to avoid damage

Image: Visual guide demonstrating how to wind the crown and pull it out to adjust the time on the SKMEI 9271 watch.

Important Note:

- Manual winding is required approximately every 24 hours if the watch is not worn consistently to keep it continuously working.
- Never wind the crown whilst the watch is on your wrist to avoid potential damage to the winding mechanism.

OPERATING YOUR AUTOMATIC WATCH

The SKMEI 9271 is an automatic watch, meaning it self-winds with the natural motion of your arm. No battery replacement is needed.

HAND WINDING AUTOMATIC WATCH

Daily Wear

For optimal performance, wear your watch daily for at least 8-10 hours. This ensures sufficient power reserve. If the watch is not worn for an extended period, it may stop and require manual winding as described in the 'Setup' section.

MAINTENANCE AND CARE

Water Resistance

The SKMEI 9271 watch is water-resistant up to 30 meters (3ATM). This means it is suitable for daily use and can withstand splashes, rain, and brief immersion in water. However, it is **not recommended** for swimming, showering, or diving. Ensure the crown is fully pushed in before any contact with water.

Image: Rear view of the SKMEI 9271 watch, highlighting the transparent case back and the 'WATER RESISTANT 3ATM' marking.

Cleaning

To maintain the appearance of your watch, wipe the case and crystal with a soft, dry cloth. For the leather strap, avoid excessive moisture and harsh chemicals. If the strap becomes wet, allow it to air dry naturally.

Storage

When not wearing your watch, store it in a cool, dry place away from direct sunlight and extreme temperatures. Consider using a watch box or a soft pouch to protect it from dust and scratches.

TROUBLESHOOTING

- **Watch has stopped or is running slowly:** This is normal for an automatic watch that has not been worn or manually wound. Refer to the 'Setup and Initial Winding' section to manually wind the watch.
- **Time is inaccurate:** Ensure the watch is fully wound. If the issue persists, it may require professional inspection.
- **Condensation under the crystal:** If condensation appears, it indicates moisture has entered the watch.

Immediately take the watch to a qualified watch repair professional.

SPECIFICATIONS

Case Width
42MM

Strap Material
Leather

Case Thickness
15MM

Image: Dimensional diagram of the SKMEI 9271 watch, illustrating its case height, case width, strap/lug width, and case thickness.

Feature	Detail
