oneisall 2601

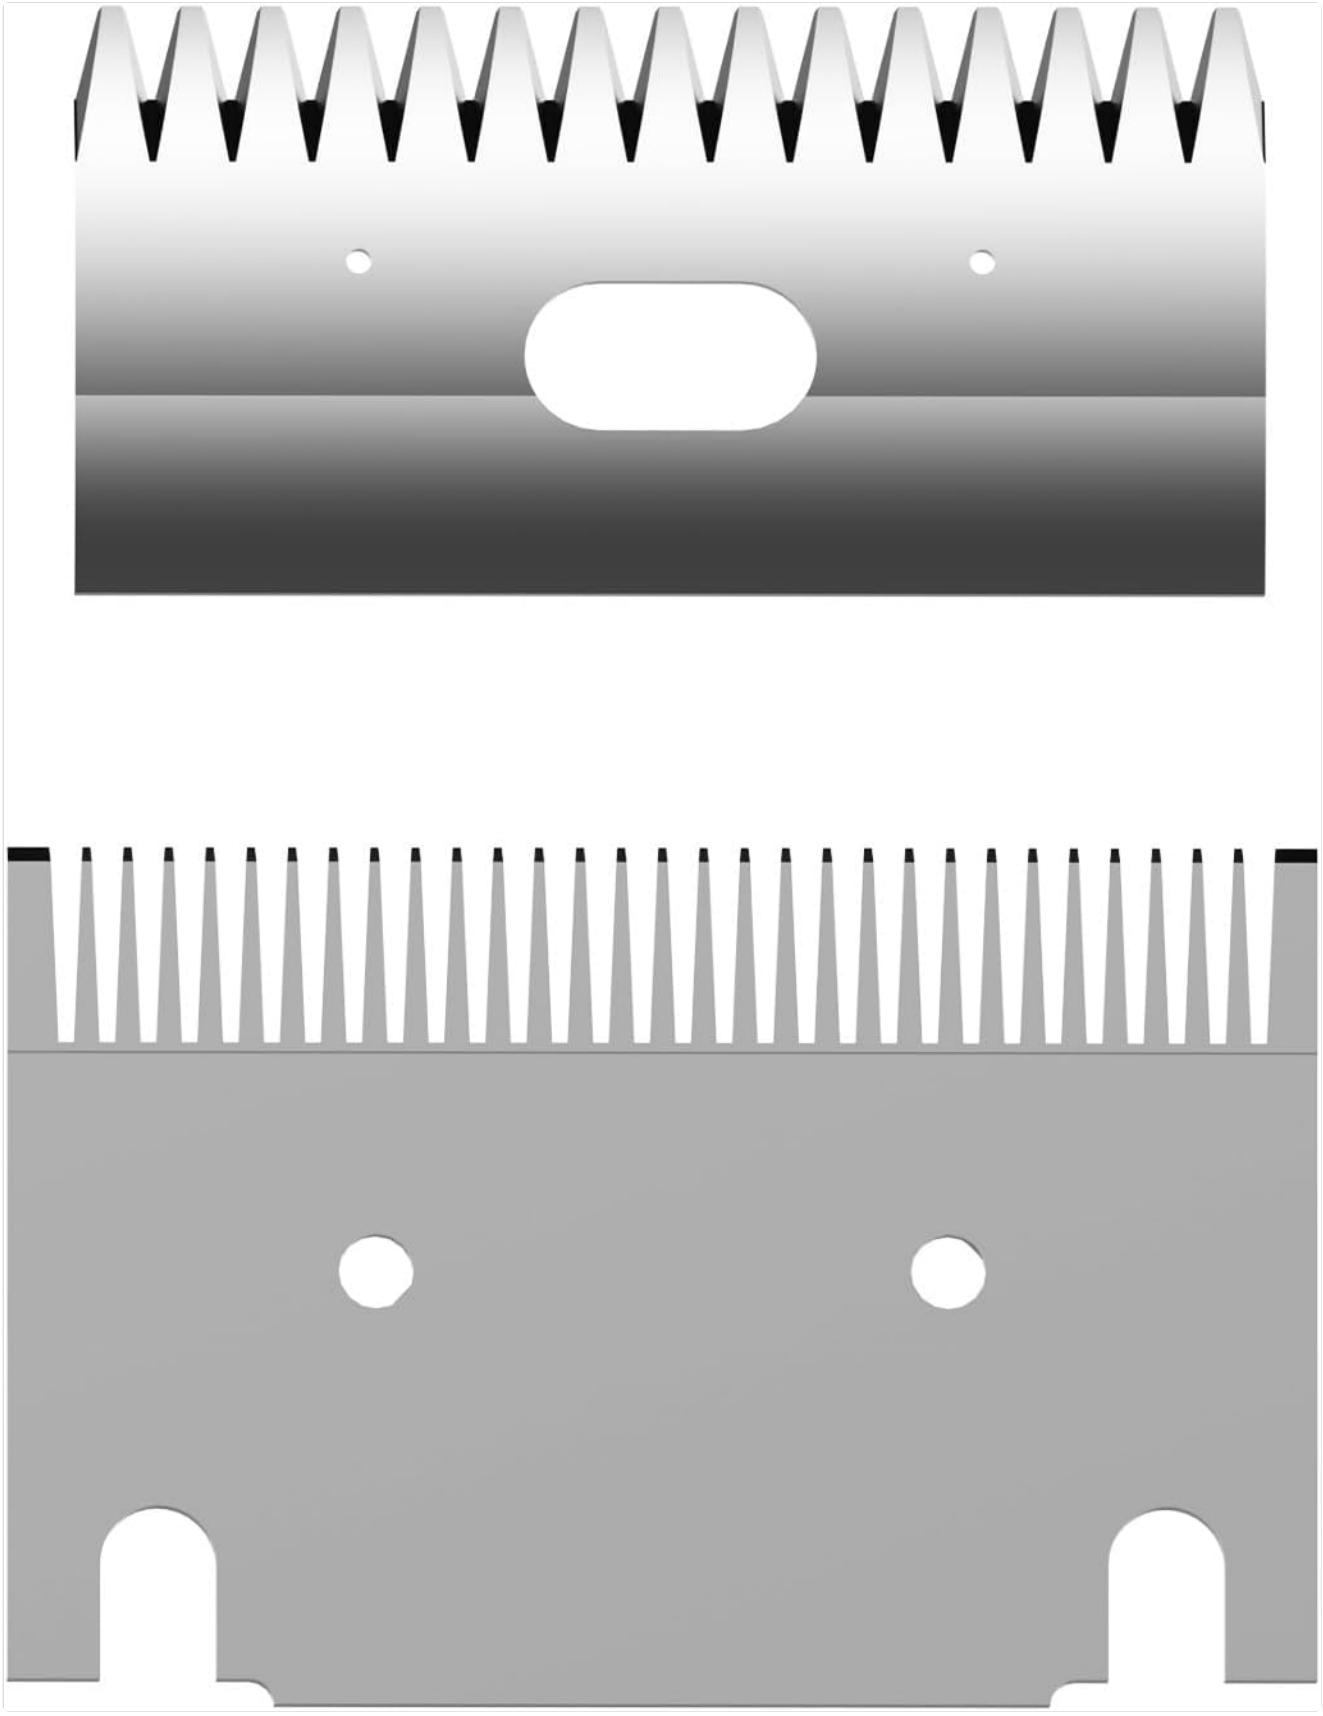

oneisall 2601 Cordless Horse Clippers Blade Instruction Manual

Introduction

Welcome to the instruction manual for your oneisall 2601 Professional Horse Grooming Clippers Blades. These blades are designed for precision grooming and are compatible with oneisall 2601 cordless horse clippers. Please read this manual carefully to ensure proper installation, use, and maintenance, which will help extend the lifespan of your blades and ensure optimal grooming results.

Product Overview

The oneisall 2601 clipper blade set consists of two main components: a stationary blade and a moving blade. These blades work together to provide a clean and efficient cut when used with compatible clippers.

This image displays the two distinct parts of the oneisall 2601 clipper blade. The upper blade is the stationary blade, featuring wider, more spaced-out teeth. The lower blade is the moving blade, characterized by its finer, more numerous teeth. Both blades have mounting holes for secure attachment to the clipper.

This image shows the oneisall 2601 cordless horse clipper, a blue and black handheld device, positioned next to its two blade components. This illustrates how the blades are part of the complete grooming tool, ready for installation.

Setup and Installation

Proper installation of the blades is crucial for safe and effective operation.

Blade Installation Steps:

1. Ensure the clipper is turned off and unplugged (if applicable) before handling blades.
2. Carefully align the moving blade onto the clipper head, ensuring the small pins on the clipper engage with the holes on the blade.
3. Place the stationary blade over the moving blade, aligning its holes with the corresponding mounting points on the clipper.
4. Secure the blades using the provided screws or locking mechanism, tightening them just enough to hold the blades firmly without overtightening, which can impede movement.
5. Verify that the blades are properly aligned and move smoothly when the clipper is briefly turned on (without touching the blades).

Operating Instructions

These blades are designed for use with the oneisall 2601 cordless horse clippers. Always ensure the animal is clean and dry before grooming to prevent premature dulling of the blades.

Grooming Tips:

- Before starting, ensure the blades are clean and lightly oiled.
- Hold the clipper firmly and move it against the direction of hair growth for an even cut.
- Use a steady, even pressure. Avoid pressing too hard, which can cause discomfort to the animal and wear down the blades faster.
- Regularly check blade temperature during extended grooming sessions. If blades become hot, turn off the clipper and allow them to cool, or switch to a spare set of blades.
- Clean hair from the blades frequently during use to maintain cutting efficiency.

Maintenance

Regular maintenance is essential for the longevity and performance of your oneisall 2601 clipper blades.

Cleaning:

- After each use, remove the blades from the clipper.
- Use a small brush to remove all hair and debris from between the teeth and surfaces of both blades.
- For a deeper clean, you may use a blade cleaning solution or a cloth dampened with rubbing alcohol. Ensure blades are completely dry before reassembly or storage.

Oiling:

- Apply 2-3 drops of clipper oil to the teeth of the blades before, during (if needed), and after each grooming session.
- Turn the clipper on for a few seconds to allow the oil to distribute evenly across the blade surfaces.
- Wipe off any excess oil.

Storage:

- Store clean, oiled blades in a dry, protected place to prevent rust and damage.

- Keep blades away from moisture and extreme temperatures.

Troubleshooting

Common Blade Issues:

Problem	Possible Cause	Solution
Blades not cutting effectively	Dull blades, improper oiling, hair buildup, incorrect blade tension.	Clean and oil blades. If dull, consider sharpening or replacing. Adjust blade tension.
Blades pulling hair	Dull blades, excessive hair buildup, blades not aligned correctly.	Clean and oil blades. Check blade alignment. Sharpen or replace if dull.
Blades getting hot quickly	Lack of oil, excessive friction, prolonged use, dirty blades.	Apply more oil. Clean blades thoroughly. Allow clipper to cool down.

Specifications

oneisall 2601 Clipper Blades

- **Model Number:** 2601 (Blade Set)
- **Compatibility:** Specifically designed for oneisall 2601 Cordless Horse Clippers.
- **Components:** Includes one stationary blade and one moving blade.
