OPERATING INSTRUCTIONS

- **Mattress Placement:** Place your Queen size mattress directly onto the wooden slats. No box spring is required.
- **Headboard Adjustment:** The headboard can be adjusted to heights between 42.9 inches and 45.7 inches to best suit your mattress thickness (recommended 6-12 inches). Adjust by repositioning the headboard attachment points during assembly or by loosening and re-tightening bolts if already assembled.
- **Storage Drawers:** The four spacious drawers are located under the bed frame. They are equipped with wheels for easy pulling and pushing. Fixtures ensure they remain securely attached to the bed base when closed, preventing unwanted sliding.
- **Drawer Usage:** Utilize the drawers for storing smaller items, clothing, or bedding. The bottom of the drawers features small perforations, suitable for various items.

- **Moisture:** Keep the bed frame away from excessive moisture to prevent damage to the wood and upholstery.
- **Sunlight:** Avoid direct sunlight exposure for prolonged periods to prevent fading of the upholstery.
- **Hardware Check:** Periodically check all bolts and screws to ensure they remain tight. Re-tighten as necessary to maintain stability and prevent noise.
- **Drawer Care:** Keep drawer wheels clean and free of debris for smooth operation.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Bed frame is squeaking or noisy.	Loose hardware; slats not properly seated; missing EVA sponge strips.	Tighten all bolts and screws. Ensure slats are correctly positioned and EVA sponge strips are in place.
Drawers are difficult to open/close or slide out.	Wheels are obstructed or dirty; drawer fixtures not aligned; drawer overloaded.	Clean wheels and tracks. Check alignment of drawer fixtures. Reduce weight in drawers.
Mattress shifts on the frame.	Mattress not compatible with slat spacing; frame not level.	Ensure the mattress is the correct size. Verify the bed frame is on a level surface. The footboard is designed to help prevent mattress shifting.
