3. SETUP

Charging the Power Bank

1. Connect the provided USB Type-C charging cord to the power bank's Type-C input port.
2. Connect the other end of the charging cord to a 5V 2A (or higher) USB power adapter or a computer's USB port.
3. The LED indicators on the power bank will illuminate to show the charging status. All LEDs will be solid when fully charged.

Charging Your Device

1. Identify the correct charging interface for your device (Lightning for iPhone, Type-C for newer iPhones/other

devices).

2. Carefully plug the power bank's integrated connector directly into your device's charging port. Ensure the connection is secure and correctly oriented.

3. The power bank will automatically begin charging your device. The LED indicators will show the remaining power level of the power bank.

4. OPERATING INSTRUCTIONS

Using the Dual Interface

The Akiisolo power bank features both a built-in Lightning connector and a Type-C port. For iPhones with a Lightning port, simply plug the integrated Lightning connector into your phone. For devices requiring a Type-C connection, use the provided Type-C to Type-C cable with the power bank's Type-C port. This allows for versatile charging of various devices.

Utilizing the Built-in Phone Holder

The power bank includes a telescopic phone holder. To use it, gently pull out the holder from its slot. Place your

smartphone into the extended holder to prop it up, allowing for hands-free viewing or video calls while your device charges.

LED Power Indicators

The power bank is equipped with LED lights that indicate its remaining battery capacity. Observe the number of illuminated LEDs to gauge the charge level:

- 4 LEDs: 75-100% charged
- 3 LEDs: 50-75% charged
- 2 LEDs: 25-50% charged
- 1 LED: 0-25% charged (recharge soon)

5. MAINTENANCE

- Keep the power bank dry. Do not expose it to moisture or liquids.
- Avoid extreme temperatures. Do not store in very hot or cold environments.
- Clean the device with a soft, dry cloth. Do not use harsh chemicals or abrasive cleaners.
- Store the power bank in a cool, dry place when not in use for extended periods.
- Recharge the power bank at least once every three months to maintain battery health.

6. TROUBLESHOOTING

Power bank is not charging:

Ensure the charging cable is securely connected to both the power bank and the power source. Verify the power adapter is functioning correctly and provides at least 5V 2A output. Try a different charging cable or adapter.

Device is not charging from the power bank:

Confirm the power bank has sufficient charge (check LED indicators). Ensure the power bank's integrated connector is fully and correctly inserted into your device's charging port. Some phone cases may obstruct the connection; try removing the case. If using the Type-C port, ensure the cable is functional.

Slow charging:

Ensure your device supports fast charging. Using your device while charging can slow down the process. Check if the charging cable is damaged or if the power bank's output port is clean.

Power bank feels warm during charging/discharging:

It is normal for the power bank to become slightly warm during use. The device features smart temperature control. If it becomes excessively hot, disconnect it immediately and contact support.
