4. Setup and Installation

This pump assembly is designed for direct replacement on compatible Troy-Bilt pressure washer models. Ensure the pressure washer is completely off and depressurized before beginning installation.

1. **Prepare the Pressure Washer:** Disconnect the spark plug wire, drain any fuel, and ensure the engine is cool. Disconnect all hoses (water inlet, high-pressure outlet).
2. **Remove Old Pump:** Locate the bolts securing the old pump to the engine. Carefully remove these bolts and detach the old pump. Note the orientation and any spacers or washers.
3. **Inspect Engine Shaft:** Clean the engine shaft thoroughly. Inspect for any damage or corrosion.
4. **Install New Pump:** Align the new RHYTHM TESTAMENT pump assembly with the engine shaft and mounting holes. Ensure a snug fit without forcing.
5. **Secure Pump:** Insert and tighten the mounting bolts evenly. Do not overtighten.
6. **Connect Hoses:** Reconnect the water inlet hose and the high-pressure outlet hose to the new pump. Ensure all connections are secure and leak-free.
7. **Final Checks:** Double-check all connections and ensure the pump is securely mounted. Reconnect the spark plug wire.

Important: Verify that the pump's specifications match your pressure washer's requirements before installation. Refer to your pressure washer's original manual for specific torque settings or additional installation details.

5. Operating Instructions

Once the pump assembly is installed, follow these general operating guidelines for your pressure washer:

1. **Connect Water Supply:** Attach a garden hose to the pump's water inlet. Ensure the water supply is turned on fully before starting the engine to prevent pump damage.
2. **Purge Air:** Squeeze the spray gun trigger to purge air from the pump and hose until a steady stream of water emerges.
3. **Start Engine:** Follow your pressure washer's engine starting procedures.
4. **Select Nozzle:** Choose the appropriate nozzle tip for your cleaning task. Different colored nozzles provide different spray patterns and pressures.
5. **Begin Cleaning:** Hold the spray gun firmly and aim at the cleaning surface. Always start with a wider spray pattern (e.g., 40° white nozzle) and adjust as needed.
6. **Shut Down:** When finished, turn off the engine, turn off the water supply, and squeeze the spray gun trigger to release residual pressure.

6. Maintenance

Regular maintenance ensures the longevity and optimal performance of your pump assembly.

- **Inspect Regularly:** Before each use, inspect the pump, hoses, and connections for any signs of wear, leaks, or damage.
- **Clean Water Inlet Filter:** Periodically clean the screen filter on the water inlet to prevent debris from entering the pump.
- **Winterization (for cold climates):** If storing the pressure washer in freezing temperatures, flush the pump with an appropriate pump protector or antifreeze solution to prevent damage from ice.
- **Store Properly:** Store the pressure washer in a dry, protected area.

7. Troubleshooting

Refer to the following table for common issues and their potential solutions.

Problem	Possible Cause	Solution
No water pressure	Clogged nozzle, insufficient water supply, air in pump, worn seals	Clean/replace nozzle, ensure full water flow, purge air from system, inspect/replace seals
Water leaks from pump	Loose connections, damaged O-rings/seals, cracked housing	Tighten connections, replace O-rings/seals, inspect for physical damage
Pump pulsates	Air in system, restricted water flow, faulty unloader valve	Purge air, check water supply/filter, consult service manual for unloader valve

If you encounter issues not listed here or if solutions do not resolve the problem, contact customer support or a qualified technician.
