4. OPERATING INSTRUCTIONS

This section provides general guidance on using the various tools in your BLACK+DECKER BMT126C kit. Always refer to specific project requirements and safety precautions.

4.1. Screwdrivers and Bits

- **Selection:** Choose the correct screwdriver tip (Phillips, Slotted, Torx, Hex) and size that matches the screw head. Using the wrong size can strip the screw or damage the tool.
- **Usage:** Apply firm, steady pressure while turning the screwdriver clockwise to tighten or counter-clockwise to loosen. For precision screwdrivers, use gentle force.

4.2. Pliers (Long Nose & Combination)

- **Long Nose Pliers:** Ideal for gripping small objects, bending wire, and reaching into tight spaces.
- **Combination Pliers:** Versatile for gripping, bending, and cutting wires. Use the cutting edge for electrical wires or soft metals.
- **Safety:** Do not use pliers to cut hardened steel wire unless specifically designed for it. Avoid using pliers as a hammer.

4.3. Adjustable Wrench

- **Adjustment:** Turn the worm screw to adjust the jaw opening to fit the fastener snugly.
- **Usage:** Apply force to the fixed jaw side to prevent slippage and damage to the fastener.

4.4. Claw Hammer

- **Nailing:** Hold the nail with one hand and strike the head squarely with the hammer face. Once the nail is started, remove your hand and continue striking.
- **Nail Removal:** Use the claw end to pry out nails. Ensure the claw is fully engaged under the nail head.
- **Safety:** Always strike squarely. Do not use the side of the hammer head.

4.5. Utility Knife

- **Blade Extension:** Extend the blade only as far as necessary for the cut.
- **Cutting:** Always cut away from your body. Use a cutting mat or sacrificial surface underneath.

- **Blade Replacement:** Replace dull blades promptly for safety and efficiency. Snap off segments as needed for fresh edges.
- **Safety:** Retract the blade fully when not in use.

4.6. Measuring Tape

- **Measuring:** Extend the tape measure to the desired length. Ensure it is straight and taut for accurate readings.
- **Locking:** Use the lock mechanism to hold the tape at a specific length.

5. CARE AND MAINTENANCE

Proper care and maintenance will extend the life of your BLACK+DECKER hand tools and ensure their optimal performance.

- **Cleaning:** After each use, wipe down tools with a clean, dry cloth to remove dirt, grease, and moisture. For stubborn grime, a mild detergent or solvent can be used, followed by thorough drying.
- **Lubrication:** Periodically apply a light coat of oil to moving parts of pliers, wrenches, and other hinged tools to ensure smooth operation and prevent rust.
- **Storage:** Always store tools in their designated slots within the blow-molded case. This protects them from damage, keeps them organized, and prevents loss. Store the case in a dry environment to prevent rust.
- **Inspection:** Regularly inspect tools for signs of wear, damage, or corrosion. Replace or repair damaged tools immediately.
- **Sharpness:** Keep cutting tools (utility knife blades, saw blades) sharp. Replace utility knife blades when dull.

6. TROUBLESHOOTING COMMON ISSUES

Most issues with hand tools can be resolved by ensuring proper usage and maintenance. Here are some common scenarios:

- **Screw Head Stripping:** Ensure you are using the correct screwdriver tip size and type for the screw. Apply adequate downward pressure to prevent cam-out.
- **Tool Slipping:** For wrenches and pliers, ensure the jaws are properly adjusted and gripping the fastener or object securely. Clean any grease or oil from the tool and workpiece.
- **Rust Formation:** Rust is typically caused by moisture. Ensure tools are clean and dry before storage. Apply a light oil coating to metal surfaces, especially in humid environments.
- **Difficulty Cutting:** Check the blade of your utility knife or saw. A dull blade requires more force and can be dangerous. Replace or sharpen as needed.
- **Lost Pieces:** The blow-molded case is designed to keep tools organized. Always return tools to their specific slots after use to prevent misplacement.
