Pitpet PP-TC101

Pitpet Dog Training Collar User Manual

Model: PP-TC101 | Brand: Pitpet

1. INTRODUCTION AND OVERVIEW

The Pitpet Dog Training Collar is designed to assist in discouraging undesirable behaviors in dogs, such as excessive barking, running off, or chewing. This system provides a customizable training experience through various modes, allowing you to find the most effective approach for your dog. It includes a remote control and a waterproof collar receiver, suitable for small, medium, and large dogs.

2. PRODUCT COMPONENTS

Your Pitpet Dog Training Collar package includes the following items:

- Remote Control Unit
- Collar Receiver Unit
- Adjustable Nylon Collar Strap
- USB Charging Cables (for remote and receiver)
- Long and Short Contact Points
- Conductive Silicone Covers for Contact Points
- Test Light Tool

Pet Safety

3. SETUP GUIDE

3.1 Charging the Devices

Before initial use, fully charge both the remote control and the collar receiver. Use the provided USB charging cables. A full charge typically takes a few hours and ensures long-lasting operation.

1. Connect the small end of the USB cable to the charging port on the remote and receiver.
2. Connect the larger end of the USB cable to a standard USB power adapter (not included) or a computer's USB port.
3. The indicator light on both devices will show charging status (refer to device-specific indicators for full charge notification).

Long-Lasting Power Fast charging

3.2 Fitting the Collar Receiver

Proper fit of the collar receiver is crucial for both effectiveness and your dog's comfort and safety.

1. Attach the collar receiver to the adjustable nylon strap.
2. Select the appropriate length of contact points (long for thick coats, short for thin coats) and screw them into the receiver.
3. Place the conductive silicone covers over the contact points to provide double skin protection.
4. Position the collar on your dog's neck so the contact points are underneath, making direct contact with the skin.
5. Adjust the strap to be snug but not too tight. You should be able to fit two fingers comfortably between the strap and your dog's neck.
6. Ensure the collar is worn for no more than 12 hours per day to prevent skin irritation.

3.3 Pairing the Remote and Receiver

The remote and receiver are typically pre-paired from the factory. If re-pairing is necessary:

1. Turn on the remote and select a channel (CH1, CH2, or CH3).
2. With the receiver off, press and hold the power button on the receiver until the indicator light flashes rapidly.
3. Within 10 seconds, press any training mode button (Beep, Vibration, or Shock) on the remote.
4. The receiver's indicator light will stop flashing and remain solid, indicating successful pairing.

4. OPERATING MODES

The Pitpet Dog Training Collar offers three distinct training modes to suit various behavioral needs and dog sensitivities. The remote has a range of up to 1600 feet, allowing for control even when your dog is at a distance.

4.1 Beep Mode

This mode emits an audible tone from the receiver. It is often used as an initial warning or for positive reinforcement when paired with desired behaviors.

4.2 Vibration Mode

The collar receiver vibrates, providing a tactile stimulus. This mode has 20 adjustable levels of intensity, allowing you to find the appropriate level for your dog's response without causing discomfort.

4.3 Shock Mode

This mode delivers a static stimulation. It also features 20 adjustable levels of intensity. **Note:** The shock mode should be used as a last resort and only if other training methods (beep and vibration) have proven ineffective. Always start at the lowest level and increase gradually, observing your dog's reaction. Misuse can cause stress or fear in your pet.

Multiple Training Modes

5. PET SAFETY GUIDELINES

Your pet's safety and well-being are paramount. Adhere to the following guidelines:

- This collar is suitable for dogs weighing between 15 and 110 lbs.
- Always use the conductive silicone covers over the contact points to prevent direct metal-to-skin contact and reduce the risk of skin irritation.
- Ensure the collar is adjusted correctly; it should be snug enough for contact points to work but loose enough to fit two fingers underneath.
- Do not leave the collar on your dog for more than 12 consecutive hours. Prolonged wear can lead to pressure necrosis or skin irritation.
- Regularly check your dog's neck for any signs of redness, sores, or irritation. If found, discontinue use until the skin heals.

- The remote control features a keypad lock function to prevent accidental activation of training modes. Utilize this feature when not actively training.
- The shock mode should be used with extreme caution and only after exhausting other training options. Always start at the lowest intensity.

6. MAINTENANCE AND CARE

6.1 Waterproof Feature

The electronic dog trainer collar is crafted from waterproof material, making it safe for use during swimming and bathing. This feature allows for consistent training in various environments without concern for water damage to the receiver unit.

waterproof material

6.2 Cleaning

Regularly clean the collar strap and receiver with a damp cloth. Ensure the contact points and the area around them are free of dirt and debris. Do not use harsh chemicals or abrasive cleaners.

6.3 Storage

When not in use, store the collar and remote in a dry, cool place, away from direct sunlight and extreme temperatures.

7. TROUBLESHOOTING

If you encounter issues with your Pitpet Dog Training Collar, refer to the following common problems and solutions:

- **Collar Receiver Not Responding:**

- Ensure both the remote and receiver are fully charged.
- Verify that the remote and receiver are properly paired to the same channel.
- Check if the remote's keypad lock is engaged.
- Confirm the collar is correctly fitted and contact points are touching the dog's skin.

- **No Stimulation (Vibration/Shock):**

- Increase the intensity level on the remote.
- Use the test light tool (included) to verify the shock function. Place the test light over the contact points and activate the shock mode. The light should illuminate.
- Ensure the contact points are clean and free of debris.

- **Collar Activates Randomly:**

- This can sometimes occur due to strong external vibrations or sounds if the collar has an automatic bark detection feature (though this model is remote-controlled). If random activation persists, ensure the remote is not accidentally being pressed.
- Ensure the keypad lock on the remote is active when not in use.

- **Charging Issues:**

- Verify that the USB cables are securely connected to both the device and the power source.
- Try using a different USB power adapter or port.
- Ensure the charging ports on the devices are clean and free of obstructions.

8. SPECIFICATIONS

Feature	Detail
Model Name	PP-TC101
Brand	Pitpet
Item Weight	10.5 ounces
Color	Black
Material	Rubber
Size	One Receiver
Target Audience	Dogs (Small, Medium, Large)
Training Modes	Beep, 20 Vibration Levels, 20 Shock Levels
Remote Range	Up to 1600 feet
