COMPATIBILITY

The RATION Roller Brush Bar is compatible with the following Ecovacs Deebot models:

- Ecovacs Deebot 500
- Ecovacs Deebot DC3G
- Ecovacs Deebot DN622
- Ecovacs Deebot N79
- Ecovacs Deebot N79S

To ensure compatibility, please verify your robot vacuum's model number before installation.

INSTALLATION

The RATION Roller Brush Bar features a simple snap-on design for straightforward replacement. Follow these general steps for installation:

1. **Power Off:** Ensure your Ecovacs Deebot vacuum is powered off and disconnected from its charging base before beginning any maintenance.
2. **Access Brush Compartment:** Turn the vacuum over and locate the brush compartment cover, typically secured by latches or screws. Open or remove this cover.
3. **Remove Old Brush Bar:** Carefully lift out the existing roller brush bar. Note its orientation for reference.
4. **Insert New Brush Bar:** Align the new RATION Roller Brush Bar with the slots in the vacuum's brush compartment. Gently press it into place until it snaps securely.
5. **Close Compartment:** Replace the brush compartment cover and secure it.
6. **Test:** Power on your vacuum and run a short cleaning cycle to confirm proper operation.

MAINTENANCE

Regular maintenance of the roller brush bar is crucial for maintaining your vacuum's cleaning efficiency and extending the lifespan of the brush.

- **Daily/Weekly Cleaning:** After each cleaning cycle or at least weekly, remove the brush bar and use a cleaning tool (often provided with the vacuum) or scissors to cut and remove any hair, string, or debris tangled around the bristles and ends of the brush.
- **Inspect for Wear:** Periodically inspect the bristles for signs of wear, bending, or damage. Severely worn bristles can reduce cleaning effectiveness.
- **Clean End Caps:** Ensure the end caps of the brush bar are free from debris, as this can impede rotation.

TROUBLESHOOTING

If you encounter issues after installing the RATION Roller Brush Bar, consider the following:

- **Reduced Cleaning Performance:**
 - Ensure the brush bar is installed correctly and securely.
 - Check for any remaining debris or tangles on the brush bar or in the brush compartment.
 - Verify that the vacuum's dustbin is not full and filters are clean.
- **Unusual Noises:**
 - Remove the brush bar and inspect it for any foreign objects lodged within the bristles or rotating mechanism.
 - Ensure the brush bar is seated properly and its end caps are clean and free to rotate.

• **Brush Bar Not Rotating:**

- Confirm the brush bar is correctly installed and fully engaged.
- Check for excessive hair or debris preventing rotation.
- Consult your vacuum's original manual for error codes related to brush bar issues.
