Key Assembly Steps:

Maintenance

- **Cleaning:** Wipe surfaces with a soft, damp cloth. Avoid harsh chemicals or abrasive cleaners that may damage the finish.
- **Hardware Check:** Periodically check all screws, bolts, and connections to ensure they are tight. Re-tighten as necessary to maintain stability and safety.
- **Mechanism Lubrication:** The dual piston mechanism is designed for long-term use. If you notice any stiffness or unusual noise during operation, consult the manufacturer's recommendations for lubrication, or contact customer support.

- **Environmental Conditions:** Avoid exposing the furniture to extreme temperatures or humidity, which can cause warping or damage to the wood and MDF components.

Troubleshooting

Issue: Bed does not close completely or remains slightly ajar.
Solution: Ensure no bedding or objects are obstructing the closing path. Check the piston mechanism for proper alignment and function. Verify that all assembly hardware is securely tightened, as loose connections can affect alignment. If the issue persists, contact customer support.

Issue: Bed is difficult to open or close.
Solution: The dual piston mechanism should assist in movement. If it feels stiff, check for obstructions. Ensure the mattress used does not exceed the recommended 8-inch thickness, as an overly thick or heavy mattress can strain the mechanism. Verify that the support legs are not catching during movement. If the mechanism seems faulty, contact customer support.

Issue: Unit feels unstable or wobbly.
Solution: This is often due to improper wall anchoring. Re-check that the unit is securely fastened to a sturdy wall using appropriate hardware. Ensure all internal assembly fasteners are tight. If the floor is uneven, consider using shims under the base for stability.
