SETUP AND INSTALLATION

Follow these steps for a straightforward installation process. For detailed visual guidance, refer to the included

instruction manual and consider watching official Delta installation videos.

1. **Prepare the Faucet:** Feed the mounting shanks through the plastic base gasket, then through the sink holes.
2. **Secure the Faucet:** Secure the faucet to the sink using the included lock nuts. Hand tighten initially.
3. **Connect Supply Lines:** Connect the hot and cold supply lines (not included) to the faucet. Tighten connections with an adjustable wrench.
4. **Aerator and Water Flow Test:** Remove the aerator with the included wrench. Run water for 30 seconds to flush the lines, then reinstall the aerator.
5. **Install Drain:** Uninstall any existing drain, then install the new drain assembly. Check for leaks after installation.

OPERATING INSTRUCTIONS

Your Delta Foundations faucet features two lever handles for precise control over water temperature and flow, along with a pop-up drain stopper.

- **Water Flow:** Turn the left handle for hot water and the right handle for cold water. Adjust both handles to achieve your desired temperature and flow rate.
- **Drain Stopper:** Use the pull-up rod located behind the faucet spout to open and close the drain. Pull up to close the drain and push down to open it.

MAINTENANCE

To maintain the appearance and performance of your Delta faucet, follow these simple guidelines:

- **Cleaning:** Clean the faucet regularly with a soft, damp cloth. Avoid abrasive cleaners, harsh chemicals, or polishes that could damage the chrome finish.
- **Aerator Cleaning:** If water flow decreases, the aerator may be clogged. Unscrew the aerator, clean any debris, and rinse thoroughly before reattaching.
- **Leak Prevention:** Ensure all connections are tight but do not overtighten. If leaks occur, check the washers and O-rings for wear and replace if necessary.

TROUBLESHOOTING

If you encounter issues with your faucet, refer to the following common solutions:

Problem	Possible Cause	Solution
Low Water Flow	Clogged aerator or supply lines.	Clean or replace aerator. Check supply lines for kinks or blockages.
Leaking from Spout	Worn out cartridge or O-rings.	Replace the cartridge or O-rings. Ensure handles are fully closed.
Leaking from Base	Loose mounting nuts or damaged gasket.	Tighten mounting nuts. Inspect and replace the base gasket if damaged.

For more complex issues, please contact Delta customer support.
