5. INSTALLATION

The Cobbe CB-11004B faucet is designed for effortless DIY installation, typically taking around 15 minutes. No plumber is

required if you have basic tools.

5.1 Pre-Installation Checklist

- Ensure your sink has 3 pre-drilled holes with a diameter of 1.0-1.4 inches.
- Confirm your deck thickness is no more than 1.6 inches.
- Gather necessary tools: adjustable wrench, Phillips screwdriver, plumber's tape (optional).
- Turn off the main water supply to your bathroom.

5.2 Faucet Installation Steps

1. **Put the Faucet on the Basin:** Insert the faucet spout and two handles into the corresponding holes on your sink basin. Ensure the handles are positioned correctly (hot on left, cold on right). The widespread design allows for adjustment between 6-12 inches.
2. **Secure Faucet Components:** From underneath the basin, slide the rubber washers, steel gaskets, and mounting nuts onto the threaded ends of the faucet and handles.
3. **Tighten Mounting Nuts:** Screw the mounting nuts until secure. Use a Phillips screwdriver to tighten the small screws on the mounting nuts for added stability.
4. **Connect Hot and Cold Water Hoses:** Hand-tighten the provided 24-inch hot and cold supply hoses to the corresponding faucet inlets (usually marked red for hot, blue for cold).
5. **Connect Quick Connector Water Hose:** Attach the quick connector water hose between the hot and cold handle inlets.
6. **Connect Hoses to Water Valves:** Connect the other ends of the hot and cold supply hoses to your hot and cold water shut-off valves. Tighten with an adjustable wrench, being careful not to overtighten. Avoid kinks and bends in the hoses.

5.3 Pop-Up Drain Installation Steps

1. **Insert Pop-Up Drain:** Place the pop-up drain into the sink drain hole from the top.
2. **Push Gasket Over Drain Hole:** From underneath the sink, push the rubber gasket over the drain hole and up against the bottom of the sink. Ensure the gasket is in the correct position to create a watertight seal.
3. **Screw Mounting Nut:** Screw the mounting nut clockwise onto the drain body until secure. Rock the drain up to ensure it will not be shaken.

5.4 Post-Installation

- Slowly turn on the main water supply.

- Check all connections for leaks. If any leaks are found, tighten the connections slightly until the leak stops.
- Run both hot and cold water for a few minutes to flush out any debris from the lines.

6. OPERATION

Your Cobbe bathroom faucet features dual lever handles for precise control over water flow and temperature, and a no-splash aerator for a smooth water stream.

- **Water Flow Control:** The dual lever handles operate independently. Lift a handle to increase water flow.
- **Temperature Control:** The left handle controls hot water, and the right handle controls cold water. Adjust both handles to achieve your desired water temperature.
- **Water-Saving Aerator:** The built-in 1.2 GPM aerator provides a smooth, no-splashing stream while conserving water. It also features a 3-layer filter to keep out impurities.
- **Pop-Up Drain:** Press the top of the drain stopper to close it and retain water in the basin. Press again to open and allow water to drain. The drain includes a built-in strainer to catch hair and debris.

7. MAINTENANCE

Proper care will ensure the longevity and appearance of your Cobbe faucet.

- **Cleaning:** Clean the faucet regularly with a soft, damp cloth. Use mild soap if necessary. Avoid abrasive cleaners, harsh chemicals, or polishes that can damage the matte black finish. The matte black finish is designed to resist fingerprints and water spots.
- **Aerator Maintenance:** If water flow decreases, the aerator may be clogged. Unscrew the aerator from the spout, clean any debris, and rinse thoroughly before reattaching.
- **Drain Cleaning:** Periodically remove the pop-up drain stopper and clean any accumulated hair or debris from the built-in strainer to maintain proper drainage.

8. TROUBLESHOOTING

Problem	Possible Cause	Solution
Low Water Flow	Clogged aerator or partially closed water supply valves.	Clean the aerator. Ensure hot and cold water supply valves are fully open.
Leaks from Faucet Base	Loose mounting nuts or damaged gaskets.	Tighten mounting nuts. Check and replace gaskets if damaged.
Leaks from Hose Connections	Loose connections or missing/damaged washers.	Ensure all hose connections are hand-tightened and then slightly tightened with a wrench. Check for proper washer placement.
Water Not Draining Properly	Clogged pop-up drain.	Remove the pop-up drain stopper and clean any debris from the strainer.
Water Temperature Issues	Incorrect handle adjustment or issues with water heater.	Adjust both hot and cold handles. Check your water heater settings.
