## Maintenance

- **Cleaning:** Wipe the bed frame with a soft, damp cloth. Avoid using harsh chemicals or abrasive cleaners, which can damage the wood finish.
- **Hardware Check:** Periodically (e.g., every 3-6 months) check all bolts and screws to ensure they remain tight. Retighten as necessary to maintain stability and prevent squeaking.
- **Wood Care:** Protect the wood from direct sunlight and extreme temperature changes to prevent warping or fading.

## Troubleshooting

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose bolts or screws.	Check and tighten all assembly hardware.
Squeaking noises.	Loose connections or friction between parts.	Ensure all bolts are tight. If squeaking persists, apply a small amount of lubricant (e.g., silicone spray) to connection points.
Trundle does not slide smoothly.	Obstruction or dirty wheels.	Check for any objects blocking the trundle's path. Clean the trundle wheels if necessary.
