## INSTALLATION INSTRUCTIONS

---

**Safety First:** Before beginning any installation, ensure the power to the appliance (if applicable) is disconnected, or the door is secured to prevent accidental movement. Wear appropriate personal protective equipment, such as gloves, if necessary.

1. **Preparation:** Carefully remove the old door seal. Note its orientation and how it was attached. Clean the channel or surface where the new seal will be installed, ensuring it is free from debris, old adhesive, or residue.
2. **Positioning:** Unpack the new FOTN DWR 2410 63 Door Seal. Orient the new seal to match the original seal's position.
3. **Attachment:** Begin attaching the new seal, typically starting from a corner or a designated attachment point. Gently press the seal into the channel or secure it using the existing clips or fasteners. Work your way around the entire perimeter, ensuring a snug and even fit. Avoid stretching the seal excessively.
4. **Final Check:** Once fully installed, close the door or appliance and check for any gaps or areas where the seal is not making full contact. Adjust as needed to ensure a complete and airtight seal.

## MAINTENANCE

---

Regular maintenance of your FOTN DWR 2410 63 Door Seal will extend its lifespan and ensure continued performance.

- **Cleaning:** Periodically clean the door seal with a mild soap and water solution. Use a soft cloth to wipe away any dirt, dust, or food particles. Rinse thoroughly and dry. Avoid harsh chemicals or abrasive cleaners, as these can damage the seal material.
- **Inspection:** Regularly inspect the seal for any signs of wear, tears, cracks, or hardening. A damaged seal can compromise insulation and lead to energy loss. If significant damage is observed, consider replacing the seal.
- **Lubrication (Optional):** For some applications, a thin layer of silicone-based lubricant can be applied to the seal to maintain flexibility and reduce friction, especially if the door is frequently opened and closed. Consult your appliance's specific recommendations if applicable.

## TROUBLESHOOTING COMMON ISSUES

---

If you experience issues after installing your new door seal, consider the following:

- **Poor Seal/Drafts:**
  - **Cause:** Improper installation, seal not fully seated, or seal twisted.
  - **Solution:** Re-examine the entire seal for proper seating in its channel. Ensure no sections are twisted or pulled taut. Adjust the seal to ensure even contact around the entire perimeter.
- **Door Difficult to Close:**
  - **Cause:** New seal is thicker than the old one, or seal is not fully compressed.
  - **Solution:** This can sometimes occur with a new seal as it needs to compress. Give it some time. If the issue persists, check for any obstructions or if the seal is installed incorrectly, causing excessive pressure.
- **Seal Appears Loose:**

- **Cause:** Attachment points are not secure, or the seal is not fully engaged in the channel.
- **Solution:** Re-secure any loose attachment points. Ensure the seal's profile is correctly inserted into its corresponding channel.
