7. Troubleshooting

Problem	Possible Cause	Solution

Problem	Possible Cause	Solution
Bed frame is wobbly or unstable.	Loose bolts or screws. Uneven floor.	Check and tighten all hardware. Move the bed to a level surface or use shims under legs if necessary.
Squeaking noises.	Loose connections. Slats rubbing against frame.	Tighten all bolts. Apply a small amount of wax or felt pads where slats meet the frame.
Slats feel flimsy or mattress sags.	Incorrect slat placement. Overweight.	Ensure slats are evenly spaced and securely fastened. Verify total weight on bed does not exceed capacity. Consider adding additional support if needed.
