OPERATING INSTRUCTIONS

Keyboard Layout and Anti-Ghosting

The K208 features a compact TKL (Tenkeyless) layout with 69 keys, including 23 keys with anti-ghosting technology. Anti-ghosting ensures that multiple key presses are registered simultaneously, which is crucial for gaming performance.

RGB Lighting Control

The keyboard is equipped with dynamic RGB backlighting offering 11 integrated lighting effects. You can cycle through these effects and adjust settings directly from the keyboard.

- **Changing Lighting Effects:** Use the dedicated function key combinations (refer to the keyboard's keycaps for specific symbols, often involving the 'Fn' key) to cycle through the 11 available RGB lighting effects.
- **Adjusting Brightness/Speed:** Specific key combinations (e.g., Fn + Arrow keys) may be used to adjust the brightness level or the speed of dynamic lighting effects.

Function Key Combinations

The keyboard utilizes an 'Fn' (Function) key to access secondary functions printed on various keycaps. For example, multimedia controls or specific system functions may be activated by holding down the 'Fn' key and pressing the corresponding key.

MAINTENANCE

Proper maintenance ensures the longevity and optimal performance of your keyboard.

- **Cleaning:** Use a soft, dry cloth to wipe the surface of the keyboard. For dust and debris between keycaps, use compressed air. Avoid using liquid cleaners directly on the keyboard.
- **Cable Care:** The coiled USB Type-C cable is designed for durability. Avoid sharp bends or excessive pulling to prevent damage.
- **Storage:** When not in use, store the keyboard in a clean, dry environment away from extreme temperatures and direct sunlight.

TROUBLESHOOTING

If you encounter issues with your EMPIRE GAMING K208 keyboard, refer to the following common solutions:

- **Keyboard Not Responding:**

- Ensure the USB Type-C cable is securely connected to both the keyboard and your device.
- Try connecting the keyboard to a different USB port on your device.
- Test the keyboard on another compatible device (PC, PS4, PS5, Xbox) to rule out device-specific issues.

- **RGB Lighting Not Working or Changing:**

- Verify that the keyboard is properly powered.
- Ensure you are using the correct 'Fn' key combinations to cycle through the 11 integrated lighting effects. Note that this keyboard offers predefined effects and colors, not individual key customization.
- If the lighting is completely off, check for any 'Fn' key combinations that might toggle the lighting on/off.

- **Specific Keys Not Working:**

- Clean the affected key area with compressed air to remove any debris.
- If the issue persists, contact customer support.
