› Plantable Seed Paper Greeting Cards Set of 6-4in x 6in Tree-Free Handmade Paper Embedded with Wildflower Seeds with Envelopes| Blank Cards for all Occasions.

ShiviAaryan Designs PSP02

ShiviAaryan Designs Plantable Seed Paper Greeting Cards Instruction Manual

Model: PSP02

1. PRODUCT OVERVIEW

The ShiviAaryan Designs Plantable Seed Paper Greeting Cards offer a unique and eco-friendly way to send messages. Each card is handmade from waste cotton and embedded with a blend of wildflower seeds, allowing the recipient to plant the card and grow beautiful flowers.

This versatile set includes 1 thank you card, 1 birthday card, and 4 blank cards, suitable for various occasions. All cards are blank inside for your personalized message.

Image 1.1: Complete set of Plantable Seed Paper Greeting Cards, including cards, envelopes, and packaging.

2. SETUP AND USAGE

These cards are designed for easy use and planting. Follow these guidelines for optimal results:

2.1 Writing on the Cards

The seed paper has a unique texture due to the embedded seeds. Use a ballpoint pen or fine-tip marker for best results when writing your message. Allow ink to dry completely to prevent smudging.

2.2 Using the Envelopes

Each card comes with a matching envelope. Carefully insert the card into the envelope. If the envelope adhesive is not strong enough, a small piece of tape can be used to secure it.

**6 CARDS
+
ENVELOPES**

3. PLANTING INSTRUCTIONS

After the card has served its purpose, it can be planted to grow wildflowers. Each card has planting instructions printed on its back for convenience.

3.1 Step-by-Step Planting Guide

1. **Prepare the Card:** Tear the card into small pieces (approximately 1-inch squares).
2. **Prepare the Pot/Garden Bed:** Fill a pot with good quality potting soil or prepare a section of your garden bed.
3. **Plant the Pieces:** Spread the torn pieces of seed paper over the surface of the soil.
4. **Cover with Soil:** Lightly cover the paper pieces with about 1/8 inch of soil.
5. **Water:** Water thoroughly but gently, ensuring the soil and paper remain moist. Avoid overwatering.
6. **Sunlight:** Place the pot in an area that receives at least 4 hours of direct sunlight daily.

7. **Germination:** Keep the soil consistently moist until germination occurs, which typically takes 1-6 weeks depending on conditions.
8. **Transplant (Optional):** Once seedlings are 2-3 inches tall, they can be transplanted into a larger pot or directly into your garden if desired.

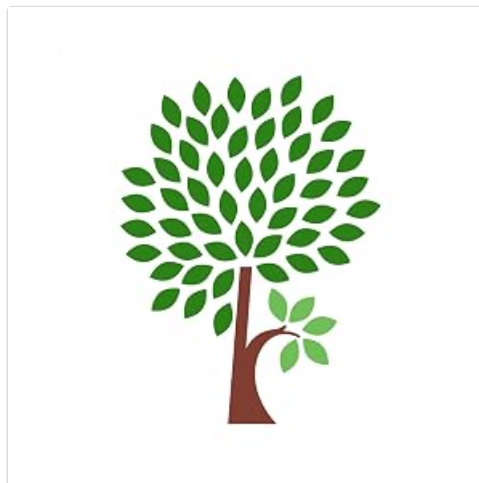

Image 3.3: A watering can gently providing water to the soil where the seed paper has been planted, illustrating the importance of consistent moisture.

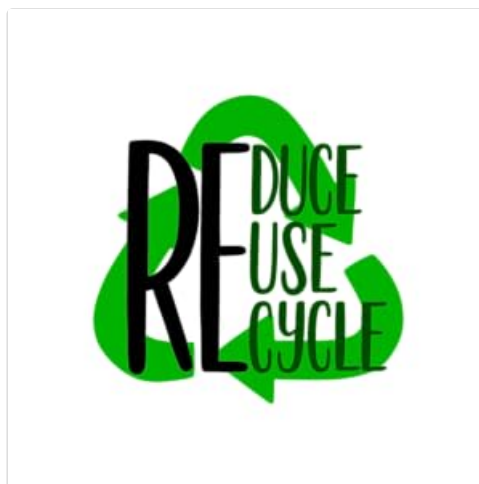

Image 3.4: A young green sprout emerging from the soil, signifying the successful germination of the wildflower seeds.

4. MAINTENANCE AND CARE

Once your wildflowers begin to grow, proper care will ensure their continued health and vibrant blooms.

4.1 Watering

Continue to water regularly, especially during dry periods. The soil should remain moist but not waterlogged. Water at the base of the plants to avoid wetting the foliage, which can help prevent fungal diseases.

4.2 Sunlight

Wildflowers thrive in sunlight. Ensure your plants receive at least 4-6 hours of direct sunlight daily. If growing indoors, consider supplementing with a grow light if natural light is insufficient.

4.3 Thinning (Optional)

If seedlings appear too crowded, you may thin them to allow stronger plants more space to grow. Gently pull out weaker seedlings, leaving the healthiest ones spaced a few inches apart.

4.4 Wildflower Blend Information

The seed paper contains a blend of Petunia, Poppy, Alyssum, Viola, and Gypsophila. These are a mix of annuals and perennials that will provide a beautiful and diverse bloom.

5. TROUBLESHOOTING

If you encounter issues with germination or plant growth, consider the following:

- **No Germination:**

- *Insufficient Moisture:* Ensure the soil is consistently moist, especially during the initial weeks.
- *Lack of Sunlight:* Seeds require adequate light to germinate and grow.
- *Temperature:* Extreme temperatures (too cold or too hot) can inhibit germination. Ideal temperatures are typically between 65-75°F (18-24°C).
- *Planting Depth:* Ensure seeds are covered with only 1/8 inch of soil. Too deep can prevent sprouts from reaching the surface.

- **Slow Growth or Weak Plants:**

- *Nutrient Deficiency:* If plants appear yellow or stunted, they may need a balanced liquid fertilizer.
- *Overcrowding:* Thin out seedlings to give stronger plants more room to develop.
- *Pests/Diseases:* Inspect plants for signs of pests or diseases and treat as necessary with appropriate organic solutions.

6. SPECIFICATIONS

Feature	Detail
Brand	ShiviAaryan Designs
Model Number	PSP02
Item Weight	0.576 ounces
Product Dimensions	4 x 4 x 0.04 inches (per card)
Color	White (paper)
