Setup Instructions

1. **Unpack the Keyboard:** Carefully remove the Xtrike Me KB-229 EN keyboard from its packaging.

2. **Connect to Computer:** Locate an available USB port on your computer. Insert the USB connector of the keyboard firmly into the USB port.

3. **Driver Installation:** The keyboard is plug-and-play. Your operating system (Windows, macOS, Linux) should automatically detect and install the necessary drivers. This process may take a few moments.

4. **Verify Functionality:** Once the drivers are installed, open a text editor or any application that accepts text input and test the keyboard by typing. Ensure all keys respond correctly.

5. **Positioning:** Place the keyboard on a stable, flat surface in a comfortable position for typing.

Operating Instructions

Basic Typing

The Xtrike Me KB-229 EN features a standard 104-key layout. Simply press the desired keys to input characters, numbers, and symbols into your computer.

Special Features: Multi-color Backlight

This keyboard includes a multi-color backlight feature. Specific key combinations or dedicated keys (if present, typically indicated by a sun or lightbulb icon) can be used to toggle the backlight on/off or adjust its brightness and color modes. Refer to the keyboard's key legends for any specific backlight control keys.

MAINTENANCE

- **Cleaning:** To clean the keyboard, disconnect it from your computer. Use a soft, damp cloth to wipe the surface. For dust and debris between keys, use compressed air. Avoid using harsh chemicals or abrasive materials.
- **Spills:** In case of liquid spills, immediately disconnect the keyboard from the computer. Invert the keyboard to drain excess liquid and allow it to dry completely for at least 24-48 hours before reconnecting.
- **Storage:** Store the keyboard in a cool, dry place away from direct sunlight and extreme temperatures when not in use for extended periods.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Keyboard not responding	Loose USB connection, faulty USB port, driver issue.	Ensure the USB cable is securely plugged into both the keyboard and the computer. Try connecting the keyboard to a different USB port on your computer. Restart your computer. Check Device Manager (Windows) or System Information (macOS) to see if the keyboard is recognized. Reinstall drivers if necessary.
Specific keys not working	Debris under the key, physical damage, software conflict.	Disconnect the keyboard and use compressed air to clear any debris from under the affected keys. Test the keyboard on another computer to rule out software issues. If the issue persists, the key may be physically damaged.

Problem	Possible Cause	Solution
Backlight not working or flickering	Backlight control setting, power issue, hardware malfunction.	Ensure the backlight is enabled using the designated control keys (if any). Try reconnecting the keyboard to a different USB port. Restart your computer.
