## 4. OPERATING THE PRINTER

### 4.1 Using the Phomemo APP

The Phomemo APP provides various functions for designing and preparing your tattoo stencils:

- **Tattoo Editing:** Adjust size, orientation, and layout of designs. Stitch multiple tattoos (1-4) together.

- **Image Cutting:** For large designs, cut into 2-9 equal parts for printing.
- **Tattoo Preview:** Visualize the actual effect of the tattoo before printing.
- **AI Generate Tattoo:** Utilize AI to create new tattoo designs.
- **Tattoo Library:** Access popular tattoo totems and trending designs.

## 4.2 Printing a Stencil

1. Select or create your desired tattoo design within the Phomemo APP.
2. Adjust print settings as needed (e.g., thickness, anti-wrinkle mode).
3. Ensure paper is correctly loaded in the printer.
4. Tap 'Print' in the app to begin printing.

## 4.3 Anti-Wrinkle Mode

The A886 features an Anti-Wrinkle Mode for flatter, clearer prints. When enabled, this mode helps flatten the tattoo paper during printing, resulting in sharper stencil lines.

## New Feature - Anti-Wrinkle Mode

Note: There will leave anti-wrinkle lines on both sides of the tattoo paper

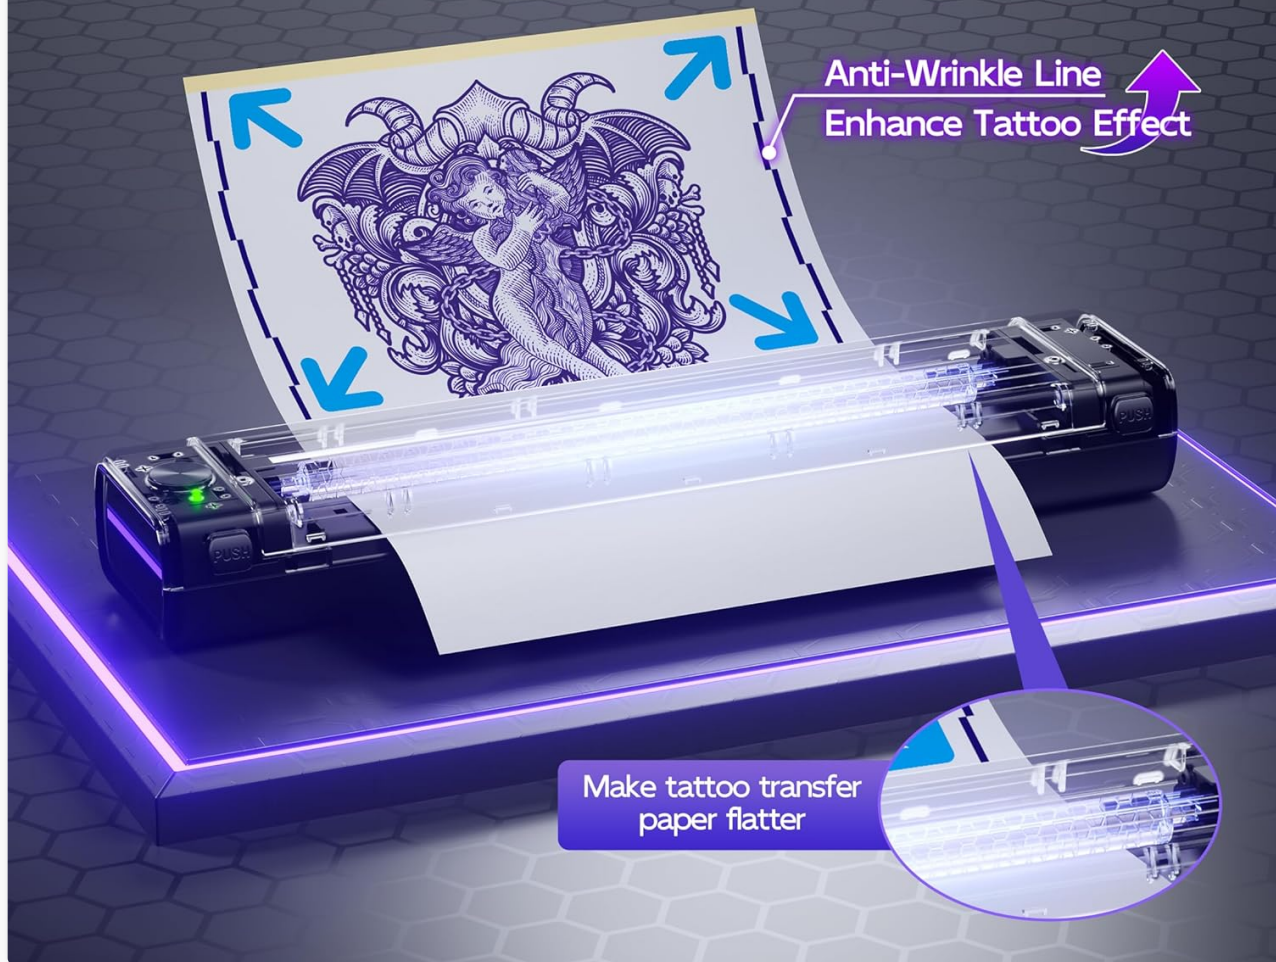

Image: Explanation of the Anti-Wrinkle Mode and its effect on print quality.

Note: This mode may leave anti-wrinkle lines on both sides of the tattoo paper. It can be turned off via the app if not desired. For best results, it is recommended to print monochrome and simple tattoo designs.

## 5. MAINTENANCE

- Only use tattoo paper; thermal paper is not supported.
- For optimal print quality, use Itari brand tattoo paper.
- If the print head overheats, the APP will pause printing. Allow five minutes for cooling before resuming.
- Keep the printer clean and free of debris. Use a soft, dry cloth to wipe the exterior.

## 6. TROUBLESHOOTING

- **Printer not connecting:** Ensure the printer is turned on and fully charged. Verify Bluetooth is enabled on your mobile device or that the USB cable is securely connected to your PC and the correct driver is installed.
- **Poor print quality:** Check if the paper is loaded correctly and centered. Ensure Anti-Wrinkle Mode is enabled for flatter prints. Use high-quality tattoo paper. For complex designs, simplify them or consider printing in monochrome.
- **Printer out of paper:** The app will notify you. Load new tattoo paper as per the setup instructions.
- **Print head overheating:** The app will display a warning. Allow the printer to cool down for at least 5 minutes before resuming operation.
