To ensure the longevity and optimal performance of your light kit:

- **Cleaning:** Use a soft, dry cloth to gently wipe dust from the lights and wires. Avoid using liquids or harsh chemicals.

- **Storage:** If storing the model for an extended period, disconnect the power source and consider removing batteries from the battery box to prevent leakage.

7. Troubleshooting

If you encounter issues with your light kit, please refer to the following common solutions:

Problem	Possible Cause	Solution
Lights do not turn on.	No power, loose connection, faulty component.	Check power source (USB or batteries). Ensure all connections are secure. Test individual lights if possible.
Some lights are flickering or dim.	Loose connection, insufficient power, damaged wire.	Verify all connections. Try a different USB power source or fresh batteries. Inspect wires for damage.
Lights only stay on when button is pressed.	Specific design of the switch.	This may be an intended feature for some kits. Refer to the online instructions for your specific model. Some users have found a workaround by bypassing the switch and plugging wires into empty slots on the back panel.

If these steps do not resolve the issue, please contact Kyglaring customer support for further assistance.
