MAINTENANCE

To ensure optimal performance and longevity of your ARENTI OP1 camera, regular maintenance is recommended:

- **Cleaning:** Periodically wipe the camera lens and body with a soft, damp cloth to remove dust, dirt, or water spots. Avoid using harsh chemicals or abrasive materials that could damage the surface.
- **Power Supply:** As a wired camera, ensure the power adapter and Type-C cable connections are secure and free from damage. The included silicone plug helps protect the power cable connection from environmental elements.
- **Firmware Updates:** Check the ARENTI app regularly for available firmware updates. Keeping the camera's firmware updated ensures access to the latest features, security enhancements, and bug fixes.
- **Environmental Protection:** While the camera is IP65 waterproof, extreme weather conditions can still impact performance. Ensure the camera is mounted securely to withstand strong winds and that its position minimizes direct exposure to prolonged heavy precipitation if possible.

TROUBLESHOOTING

If you encounter issues with your ARENTI OP1 camera, refer to the following common troubleshooting steps:

- **No Power/Offline:**

- Check if the power adapter is securely connected to the camera and a working power outlet.
- Ensure the Type-C cable is not damaged.
- Verify your Wi-Fi network is active and stable.
- If the camera is offline, try restarting it by unplugging and re-plugging the power.

- **Poor Video Quality:**

- Ensure the camera lens is clean and free from obstructions.
- Check your Wi-Fi signal strength in the camera's location. A weak signal can affect streaming quality.
- Verify that the camera's resolution settings in the app are set to 2K 4MP.

- **Frequent False Alarms:**

- Adjust the motion detection sensitivity in the app to a lower level.
- Define specific activity zones to exclude areas with frequent irrelevant motion (e.g., moving trees, street traffic).

- **Two-Way Audio Issues:**

- Ensure the microphone and speaker options are enabled in the app's sound settings.
- Check the speaker volume level in the app.
- Verify that there are no physical obstructions blocking the microphone or speaker on the camera.

- **Cannot Connect to Wi-Fi:**

- Confirm your router is broadcasting a 2.4GHz Wi-Fi signal. The camera does not support 5GHz for initial connection.
- Ensure you are entering the correct Wi-Fi password.
- Move the camera closer to the router during the initial setup process.
- Perform a factory reset on the camera (refer to the app setup section for instructions).
