2. SETUP

2.1 Unpacking

Carefully remove all components from the packaging. Retain packaging for future storage or transport.

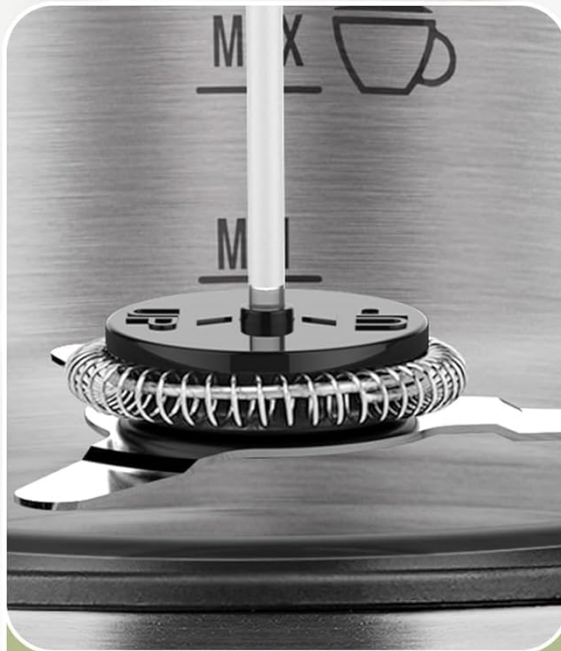

2.2 Initial Cleaning

Before first use, wash the stainless steel milk jug, frothing whisk, frothing whisk holder, and chocolate cover with warm soapy water. Rinse thoroughly and dry. Wipe the exterior of the power base with a soft, damp cloth. Do not immerse the power base in water.

3. OPERATING INSTRUCTIONS

3.1 Whisk Selection

The frother comes with a magnetic frothing whisk. For creating foam, ensure the whisk with the spring ring is attached. For simply heating milk or chocolate without frothing, remove the spring ring from the whisk.

3.2 Filling the Milk Jug

Pour milk into the stainless steel jug. Observe the internal markings for minimum and maximum fill levels. Do not exceed the maximum fill line for frothing (8.5oz/250mL) or heating (17oz/500mL) to prevent overflow.

3.3 Selecting a Function

Place the milk jug onto the power base. Use the control panel to select your desired function:

- **Hot Thick Foam:** For dense, creamy foam.
- **Hot Light Foam:** For lighter, airy foam.
- **Hot Chocolate:** For perfectly mixed and heated hot chocolate. Use the chocolate cover for this function.
- **Hot Milk:** For heated milk without frothing.
- **Cold Milk Foam:** For cold frothed milk.

The device will automatically start and stop when the process is complete. Do not use the transparent lid to cover the milk frother during the process of heating milk and frothing milk, as it affects efficiency.
