## OPERATING INSTRUCTIONS

## Controls Overview

The amPlug3 Tone Hammer features three main control wheels on the top surface, along with side buttons for power and effects/rhythm selection:

Control	Function
<b>Gain</b>	Adjusts the input level from your bass guitar. Turn clockwise to increase gain, counter-clockwise to decrease.
<b>Tone (Tilt EQ)</b>	Shapes your sound by balancing low and high frequencies. Turning the knob adjusts the overall tonal character, boosting lows while cutting highs, or vice-versa.
<b>Master Volume</b>	Controls the overall output volume to your headphones.
<b>Power Button</b>	Press and hold to turn the unit on or off.
<b>FX/Rhythm Button</b>	Cycles through onboard effects and activates the drum machine.

## Dual Analog Channels

The amPlug3 offers two distinct analog channels, indicated by the color of the LED on the unit:

- **Clean Channel:** Provides a warm, dynamic, and uncolored bass tone. (Indicated by a green LED)
- **Drive Channel:** Delivers a rich, overdriven sound inspired by the Tone Hammer amplifier series. (Indicated by a red LED)

Switch between channels by pressing the dedicated button on the side of the unit.

## Onboard Effects

Enhance your sound with three built-in effects, accessible via the FX/Rhythm button:

- **Compressor:** Modeled after the Aguilar TLC Compressor, this effect helps to balance dynamics and enhance clarity, providing a more consistent sound.
- **Reverb:** A room-style reverb adds subtle space and warmth to your tone, simulating acoustic environments.
- **Chorus:** Inspired by Aguilar's Chorusaurus pedal, this effect adds dimension and motion to your sound, creating a lush, swirling texture.

Press the FX/Rhythm button repeatedly to cycle through the effects. The specific effect engaged may be indicated by a combination of LED flashes or by listening to the sound.

## Built-in Drum Machine

The amPlug3 includes built-in rhythm patterns with adjustable tempo, providing a versatile backbeat for practice and songwriting. To activate the drum machine, press the FX/Rhythm button until a drum pattern begins. Use the Tap button on the side to adjust the tempo of the drum beats.

## Direct Recording

The amPlug3 Tone Hammer can be used for direct recording. Connect a TRRS cable from the amPlug3's AUX input/output jack to your recording setup, such as a smartphone or audio interface. This allows for high-quality direct recording of your bass tone with all the amPlug3's features.
