onerbl AC-DC Adapter Instruction Manual for Shark IP3000 Series Cordless Stick Vacuums

Compatible with Models: IP3251, IP3251C, IP3251T6, IP3251CT6

1. Introduction

This onerbl AC-DC adapter serves as a replacement power supply for specific Shark IP3000 Series cordless stick vacuums. It is designed to provide the necessary power for charging the vacuum's 21.6V 3.75Ah 81Wh Li-ion battery (XBATR640US).

Please read this manual thoroughly before using the adapter to ensure proper operation and safety.

2. Setup

1. **Unpack the Adapter:** Carefully remove the AC-DC adapter and its power cord from the packaging.
2. **Inspect for Damage:** Before use, visually inspect the adapter and cord for any signs of physical damage. Do not use if damaged.
3. **Connect to Vacuum:** Insert the barrel connector end of the adapter cord into the charging port of your Shark IP3000 Series cordless stick vacuum.
4. **Connect to Power Outlet:** Plug the AC prongs of the adapter into a standard 100-240V AC wall electrical outlet. Ensure the outlet is easily accessible.

This image displays the onerbl AC-DC adapter unit alongside its coiled power cord, ready for connection.

The onerbl AC-DC adapter is shown plugged into a standard wall electrical outlet, demonstrating its compact design when in use.

3. Operating Instructions

- **Charging:** Once connected, the adapter will begin to supply power to your vacuum's battery. Refer to your vacuum's instruction manual for specific charging indicators and times.
- **Battery Voltage Note:** The 21.6V specification refers to the vacuum's battery voltage, not the charger's output voltage. This adapter is designed to provide the correct charging voltage for 21.6V Li-ion batteries.
- **Battery Lifespan:** Rechargeable batteries have a finite lifespan, typically 1 to 3 years. If an old or degraded battery no longer accepts a charge, this indicates a battery issue, not a malfunction of the adapter.
- **Indoor Use Only:** This adapter is designed for indoor use in dry locations only. Do not expose to water or excessive humidity.

4. Maintenance

- **Cleaning:** Disconnect the adapter from the power outlet and the vacuum before cleaning. Use a dry, soft cloth to

wipe the exterior. Do not use liquid cleaners or solvents.

- **Storage:** When not in use, store the adapter in a cool, dry place away from direct sunlight and extreme temperatures. Avoid wrapping the cord too tightly around the adapter.
- **Cord Care:** Do not bend, twist, or pull the power cord excessively. Avoid placing heavy objects on the cord.

5. Troubleshooting

- **Vacuum Not Charging:**
  - Ensure the adapter is securely plugged into both the wall outlet and the vacuum's charging port.
  - Verify that the wall outlet is functional by testing it with another device.
  - If the vacuum's battery is old or damaged, it may no longer accept a charge. This is a battery issue, not an adapter fault. Consider replacing the vacuum battery if it is past its typical lifespan.
- **Adapter Feels Warm:** It is normal for the adapter to feel slightly warm during operation. If it becomes excessively hot, disconnect it immediately and contact support.
