The hot glue gun is designed for ease of use, featuring a quick heat-up time and a drip-free nozzle for clean and precise work. It is compatible with a wide range of materials, making it a versatile tool for various crafting and repair needs.

## 2. SETUP

---

1. **Unpack the Kit:** Carefully remove the hot glue gun and glue sticks from the packaging. Ensure all components are present: one hot glue gun and 30 hot glue sticks.
2. **Prepare the Work Area:** Choose a clean, flat, and heat-resistant surface for your project. Place a protective mat or paper underneath to catch any potential drips.
3. **Insert a Glue Stick:** Insert one of the provided mini glue sticks into the circular opening at the back of the glue gun. Push it gently until it stops. Do not force it.
4. **Connect to Power:** Plug the glue gun's power cord into a standard electrical outlet.
5. **Power On:** Locate the ON/OFF switch, typically found on the handle or base of the glue gun. Flip the switch to the "ON" position. An indicator light (if present) will illuminate.

6. **Preheat:** Allow the glue gun to preheat for 1-2 minutes. The nozzle will become hot during this time.

Ensure the glue stick is properly seated before plugging in the device. The glue gun is designed to heat up quickly, allowing you to begin your projects without significant delay.

### 3. OPERATING INSTRUCTIONS

---

1. **Test the Glue Flow:** After preheating, gently press the trigger to check if the glue is flowing smoothly from the nozzle. A small amount of melted glue should emerge.
2. **Apply Glue:** Position the nozzle close to the surface where you want to apply glue. Press the trigger to dispense the desired amount. The drip-free nozzle helps ensure precise application.
3. **Join Surfaces:** Immediately press the two surfaces together after applying glue. Hold them firmly for a few seconds to allow the glue to set and form a strong bond.
4. **Refill Glue Sticks:** As the current glue stick shortens, insert a new one into the back of the gun. The new stick will

push the old one forward, ensuring continuous glue flow.

5. **Power Off:** When finished, turn the ON/OFF switch to the "OFF" position and unplug the glue gun from the power outlet.
6. **Cool Down:** Allow the glue gun to cool completely before storing it. Do not touch the nozzle until it has cooled.

## Important Usage Notes:

- Always use the correct size glue sticks (mini size, 4" x 0.27") for this glue gun to ensure proper function and prevent damage.
- Avoid touching the hot nozzle or melted glue to prevent burns.
- Do not leave the glue gun unattended while it is plugged in or hot.

## 4. MAINTENANCE

---

- **Cleaning the Nozzle:** After the glue gun has cooled completely, gently wipe any excess dried glue from the nozzle with a soft cloth. Do not use abrasive materials or sharp objects, as this can damage the nozzle.
- **Storage:** Store the glue gun in a dry, cool place, away from direct sunlight and out of reach of children. Ensure the power cord is not kinked or damaged during storage.
- **Regular Inspection:** Periodically inspect the power cord and the body of the glue gun for any signs of damage, such as cuts, fraying, or cracks. If damage is found, discontinue use and contact customer support.

## 5. TROUBLESHOOTING

---

| Problem                             | Possible Cause   | Solution   |
|-------------------------------------|--|--|
| Glue gun does not heat up.          | Not plugged in, power switch off, or power outlet issue.                                   | Ensure the glue gun is securely plugged into a working outlet and the ON/OFF switch is in the "ON" position. Check the power outlet with another device. |
| Glue does not flow from the nozzle. | Insufficient preheating time, glue stick not fully inserted, or incorrect glue stick size. | Allow the gun to preheat for the recommended 1-2 minutes. Push the glue stick further into the gun. Verify you are using mini glue sticks (4" x 0.27").  |
| Excessive dripping from the nozzle. | Overheating or incorrect angle.  | Ensure the glue gun is not left on for extended periods without use. Try holding the gun at a slightly different angle during application.               |
| Glue does not bond properly.        | Surfaces not clean, glue cooled too quickly, or incompatible material.                     | Clean surfaces thoroughly before application. Apply glue and join surfaces immediately. Ensure materials are compatible with hot glue.                   |
