Please read this manual carefully before use and retain it for future reference.

2. SAFETY INFORMATION

Always observe the following safety precautions when using the extension hose with your steam cleaner:

- **Hot Steam Hazard:** The steam cleaner produces high-temperature steam. Always direct the steam away from yourself, other people, pets, and heat-sensitive materials.
- **Proper Connection:** Ensure the extension hose is securely connected to the steam cleaner and any attachments before operating. A loose connection can lead to steam leaks and potential burns.
- **Inspect Before Use:** Before each use, inspect the hose for any signs of damage, cracks, or wear. Do not use if damaged.
- **Disconnect Power:** Always unplug the steam cleaner from the power outlet before attaching or detaching the extension hose or any other accessories.
- **Children and Pets:** Keep the steam cleaner and its accessories out of reach of children and pets.
- **Intended Use:** Use this extension hose only with the MOSCHE WHL-603 Handheld Pressurized Steam Cleaner for its intended cleaning purposes. Do not modify the hose or use it for any other application.

1. **Ensure Power Off:** Make sure your WHL-603 steam cleaner is unplugged from the electrical outlet and has cooled down if recently used.
2. **Locate Connection Port:** Identify the accessory connection port on your WHL-603 steam cleaner. This is typically where other attachments connect.
3. **Attach Hose:** Align the male end of the extension hose with the connection port on the steam cleaner. Push firmly and twist clockwise until it clicks securely into place. Ensure there is no wobble.
4. **Attach Accessory (Optional):** If you plan to use a specific cleaning accessory (e.g., nozzle, brush) with the

5. OPERATING INSTRUCTIONS

Once the extension hose is securely attached, you can begin using your steam cleaner with enhanced reach:

1. **Prepare Steam Cleaner:** Fill the steam cleaner with water and power it on according to its own instruction manual. Allow it to heat up until ready to produce steam.
2. **Direct Steam:** Hold the end of the extension hose firmly. Direct the steam nozzle towards the area you wish to clean. The hose's flexibility allows you to maneuver around obstacles and into tight spaces.
3. **Cleaning Technique:** For best results, hold the nozzle close to the surface. Use slow, deliberate movements to allow the steam to penetrate and loosen dirt. Wipe away loosened grime with a clean cloth as you go.
4. **Safety During Operation:** Always be mindful of the hot steam. Do not point the hose at yourself or others. Avoid prolonged exposure to any single surface, especially delicate ones.

5. **After Use:** Once cleaning is complete, turn off and unplug the steam cleaner. Allow the unit and hose to cool down completely before disconnecting the hose.

6. MAINTENANCE

Proper maintenance will ensure the longevity of your extension hose:

- **Cleaning:** After each use, wipe down the exterior of the hose with a damp cloth to remove any dirt or residue. Do not submerge the hose in water.
- **Drying:** Ensure the hose is completely dry before storing to prevent mildew or damage.
- **Storage:** Store the extension hose in a cool, dry place, away from direct sunlight and extreme temperatures. Avoid kinking or sharply bending the hose during storage.
- **Inspection:** Periodically inspect the connection points and the hose material for any signs of wear, cracks, or

damage. Replace the hose if any damage is observed.

7. TROUBLESHOOTING

If you encounter issues with your extension hose, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Steam leaks from connection.	Hose not securely attached; damaged O-ring/seal.	Ensure hose is fully clicked into place. Inspect O-rings for damage; replace hose if seals are compromised.
No steam or weak steam from hose.	Steam cleaner not ready; blockage in hose/nozzle.	Check steam cleaner's readiness. Disconnect hose and check for blockages. Clean nozzle if attached.
Hose feels loose after connection.	Improper connection; worn locking mechanism.	Ensure firm push and twist until secure. If issue persists, the locking mechanism may be worn, requiring hose replacement.
