### 3. INSTALLATION GUIDE

#### Before You Begin

- Ensure your refrigerator is unplugged or the circuit breaker is turned off before beginning installation.
- Locate your current air filter compartment. This is typically found on the back wall of the fresh food compartment, often near the top.
- Have a clean cloth ready to wipe down the compartment if needed.

#### Step-by-Step Installation

1. **Open the Filter Compartment:** Depending on your refrigerator model, you may need to press a tab, slide a cover, or twist a knob to open the air filter housing. Refer to your refrigerator's user manual if you are unsure.
2. **Remove the Old Filter:** Carefully pull out the old air filter. Dispose of it properly.
3. **Insert the New Filter:** Take one Samoser Refrigerator Air Filter from the package. Align the new filter with the housing and slide it into place. Ensure it clicks securely or fits snugly.
4. **Close the Compartment:** Close the air filter housing cover until it latches securely.
5. **Reset Filter Indicator (if applicable):** Many refrigerators have a filter indicator light. Consult your refrigerator's manual for specific instructions on how to reset this light after replacing the filter. Common methods include pressing and holding a 'Filter Reset' button for a few seconds.

#### **4. OPERATION AND USAGE**

Once installed, the Samoser Refrigerator Air Filter continuously works to circulate air through its activated carbon media, trapping and neutralizing odors from food items. This helps to keep your refrigerator smelling fresh and prevents odor transfer between different foods.

The filter operates silently and requires no active user input after installation. Its effectiveness is maintained as long

as the filter media is not saturated with odors or dust.

## 5. MAINTENANCE AND REPLACEMENT

For optimal performance and to ensure your refrigerator remains odor-free, it is recommended to replace the air filter every 6 months. This timeframe may vary depending on usage and the types of food stored in your refrigerator. Some refrigerators have an indicator light that will illuminate when it's time to replace the filter.

Regular replacement prevents the filter from becoming saturated, which would reduce its ability to absorb odors effectively. No cleaning or maintenance of the filter itself is required; simply replace it with a new one when due.

## 6. TROUBLESHOOTING

Issue	Possible Cause	Solution
Refrigerator still has odors after filter replacement.	Old filter not fully removed, new filter not properly seated, or strong odor source still present.	Ensure the new filter is correctly installed. Check for and remove any spoiled food items. Clean the refrigerator interior thoroughly.
Filter indicator light remains on after replacement.	Filter reset procedure not performed or performed incorrectly.	Refer to your refrigerator's user manual for the specific filter reset instructions. Typically involves pressing and holding a 'Filter Reset' button.
Filter does not fit into the compartment.	Incorrect filter model for your refrigerator.	Double-check your refrigerator's model number against the compatibility list. Ensure the filter is oriented correctly.
