CARE AND MAINTENANCE

- **Cleaning:** Wipe the surfaces with a soft, damp cloth. Avoid using harsh chemicals or abrasive cleaners, as these can damage the engineered wood and MDF finish.
- **Spills:** Immediately wipe up any spills to prevent moisture damage to the wood material.
- **Dusting:** Regularly dust the table with a dry, soft cloth to maintain its appearance.
- **Power Strip:** Ensure the power strip remains dry. Do not expose it to liquids. Periodically check the power cord for any signs of damage.

- **Drawer Slides:** If drawers become stiff, a small amount of silicone-based lubricant can be applied to the drawer slides.
- **Weight Capacity:** Do not exceed the maximum static load capacity of 50 kg for the tabletop and 4.7 kg for each drawer to prevent damage.

TROUBLESHOOTING

Power Strip Issues:

- **No Power to Devices:**

  - Ensure the bedside table's main power cord is securely plugged into a functional wall outlet.
  - Check if the wall outlet itself is working by plugging in another device.
  - Verify that your device's charging cable is properly connected to the power strip and the device.
  - If the power strip has a reset button (not specified but common), try pressing it.

Drawer Issues:

- **Drawers Stick or Don't Close Smoothly:**

  - Check for any obstructions inside the drawer or along the drawer slides.
  - Ensure the drawer slides are properly aligned and not bent.
  - Verify that the drawer contents are not overloaded or unevenly distributed.
  - Re-check the assembly of the drawer and its slides according to the manual.

Stability Issues:

- **Table Wobbles:**

  - Ensure all screws and fasteners are tightened securely. Do not overtighten.
  - Place the table on a flat, even surface.
  - Check if any of the feet or base components are damaged or uneven.
